

# Accessing and Manipulating Life-Sciences Ontologies using Web Services

Olivier Dameron, Mark A. Musen

SMI - Stanford University

# Context:

## Semantic needs for Life Sciences

- Huge  $\exists$  corpus of distributed data and kn.
  - automate access
  - automate retrieval
  - automate processing
- Syntactic and semantic heterogeneity
  - explicit and formalized representation of kn.
- Applications need to cooperate
  - automate as much as possible

# Context: Overlap with the SW approach

- Limitations are common with other domains
  - sharing D, sharing K, enhance interop.
- Web Technologies = promising approach
  - some are already mainstream
- $\exists$  efforts for representing and formalizing K
  - GO, OMIM, MGED, Galen, FMA
- However:
  - under exploited
  - not inter-connected

# Hypothesis

- Life Sciences = interesting test case for a Semantic Web killer app
- Some of the outcome could be generalized to other domains

# Objectives

- Identify ontology manipulation functions
  - application and domain-independant
- Implement them as Web Services: **OWS**
  - scenario of need for OWS in LS context
  - can be implemented with current technologies
- OWS are also necessary to SW framework
  - processing semantic descr. of regular WS
  - automatic retrieval, composition

# OWS Categories

- Queries
- Views
- Translations
- Mapping
- Versioning
- Merging
- Reasoning

# OVS Categories

# OWS Implementation scenario

- Retrieve the clinical trials relevant to a patient with lung tumor
  - stage the patient's tumor
  - query to NCI clinical trials online DB

# OWS Implementation scenario

**Include trials that are no longer recruiting patients.** [Search-Within-Results](#) [Query Details](#) [Map of locations](#)

130 studies were found. Here are studies 1 to 50. [Next 50](#)

- Recruiting** [Study of Motexafin Gadolinium and Docetaxel for Advanced Solid Tumors](#)  
Conditions: Breast Neoplasms; Ovarian Neoplasms; Prostatic Neoplasms; Lung Neoplasms
- Recruiting** [Tariquidar and Docetaxel to Treat Patients with Lung, Ovarian, and Cervical Cancer](#)  
Conditions: Lung Neoplasms; Ovarian Neoplasms; Cervix Neoplasms
- Recruiting** [Phase I Dose-finding Study of E7070 in Combination with Irinotecan](#)  
Conditions: Colorectal Cancer; Colorectal Carcinoma; Colorectal Tumors; Pulmonary Neoplasms; Pulmonary Cancer

**Satraplatin for Locally Advanced Non-Small Cell Lung Cancer with Simultan****This study is currently recruiting patients.**

<b>Sponsored by:</b>	GPC Biotech
<b>Information provided by:</b>	GPC Biotech

**▶ Purpose**

**PURPOSE:** This trial is designed to compare the combination of the investigational oral cytotoxic drug, satraplatin, and radiation Cancer (NSCLC) with no prior chemotherapy or radiation therapy treatment. Please refer to the Eligibility Criteria below for ke

**WHAT IS SATRAPLATIN:** Satraplatin is an oral, investigational anticancer drug that is a member of the platinum-based class o

**▶ Eligibility**

Ages Eligible for Study: 18 Years and above, Genders Eligible for Study: Both

## Criteria

## Inclusion Criteria:

- ◆ Locally advanced or medically inoperable NSCLC (stage II or III)
- ◆ ECOG performance status score 0-2
- ◆ Adequate bone marrow, liver, and pulmonary functions
- ◆ Life expectancy > three months.

## Exclusion Criteria:

- ◆ Prior malignancy
- ◆ Serious concurrent uncontrolled medical disorder.
- ◆ Uncontrolled or significant cardiovascular disease
- ◆ History of mastectomy
- ◆ Pregnant or breast-feeding patients are not eligible
- ◆ Prior radiotherapy to the primary tumor site or cytotoxic chemotherapy

# TNM classification

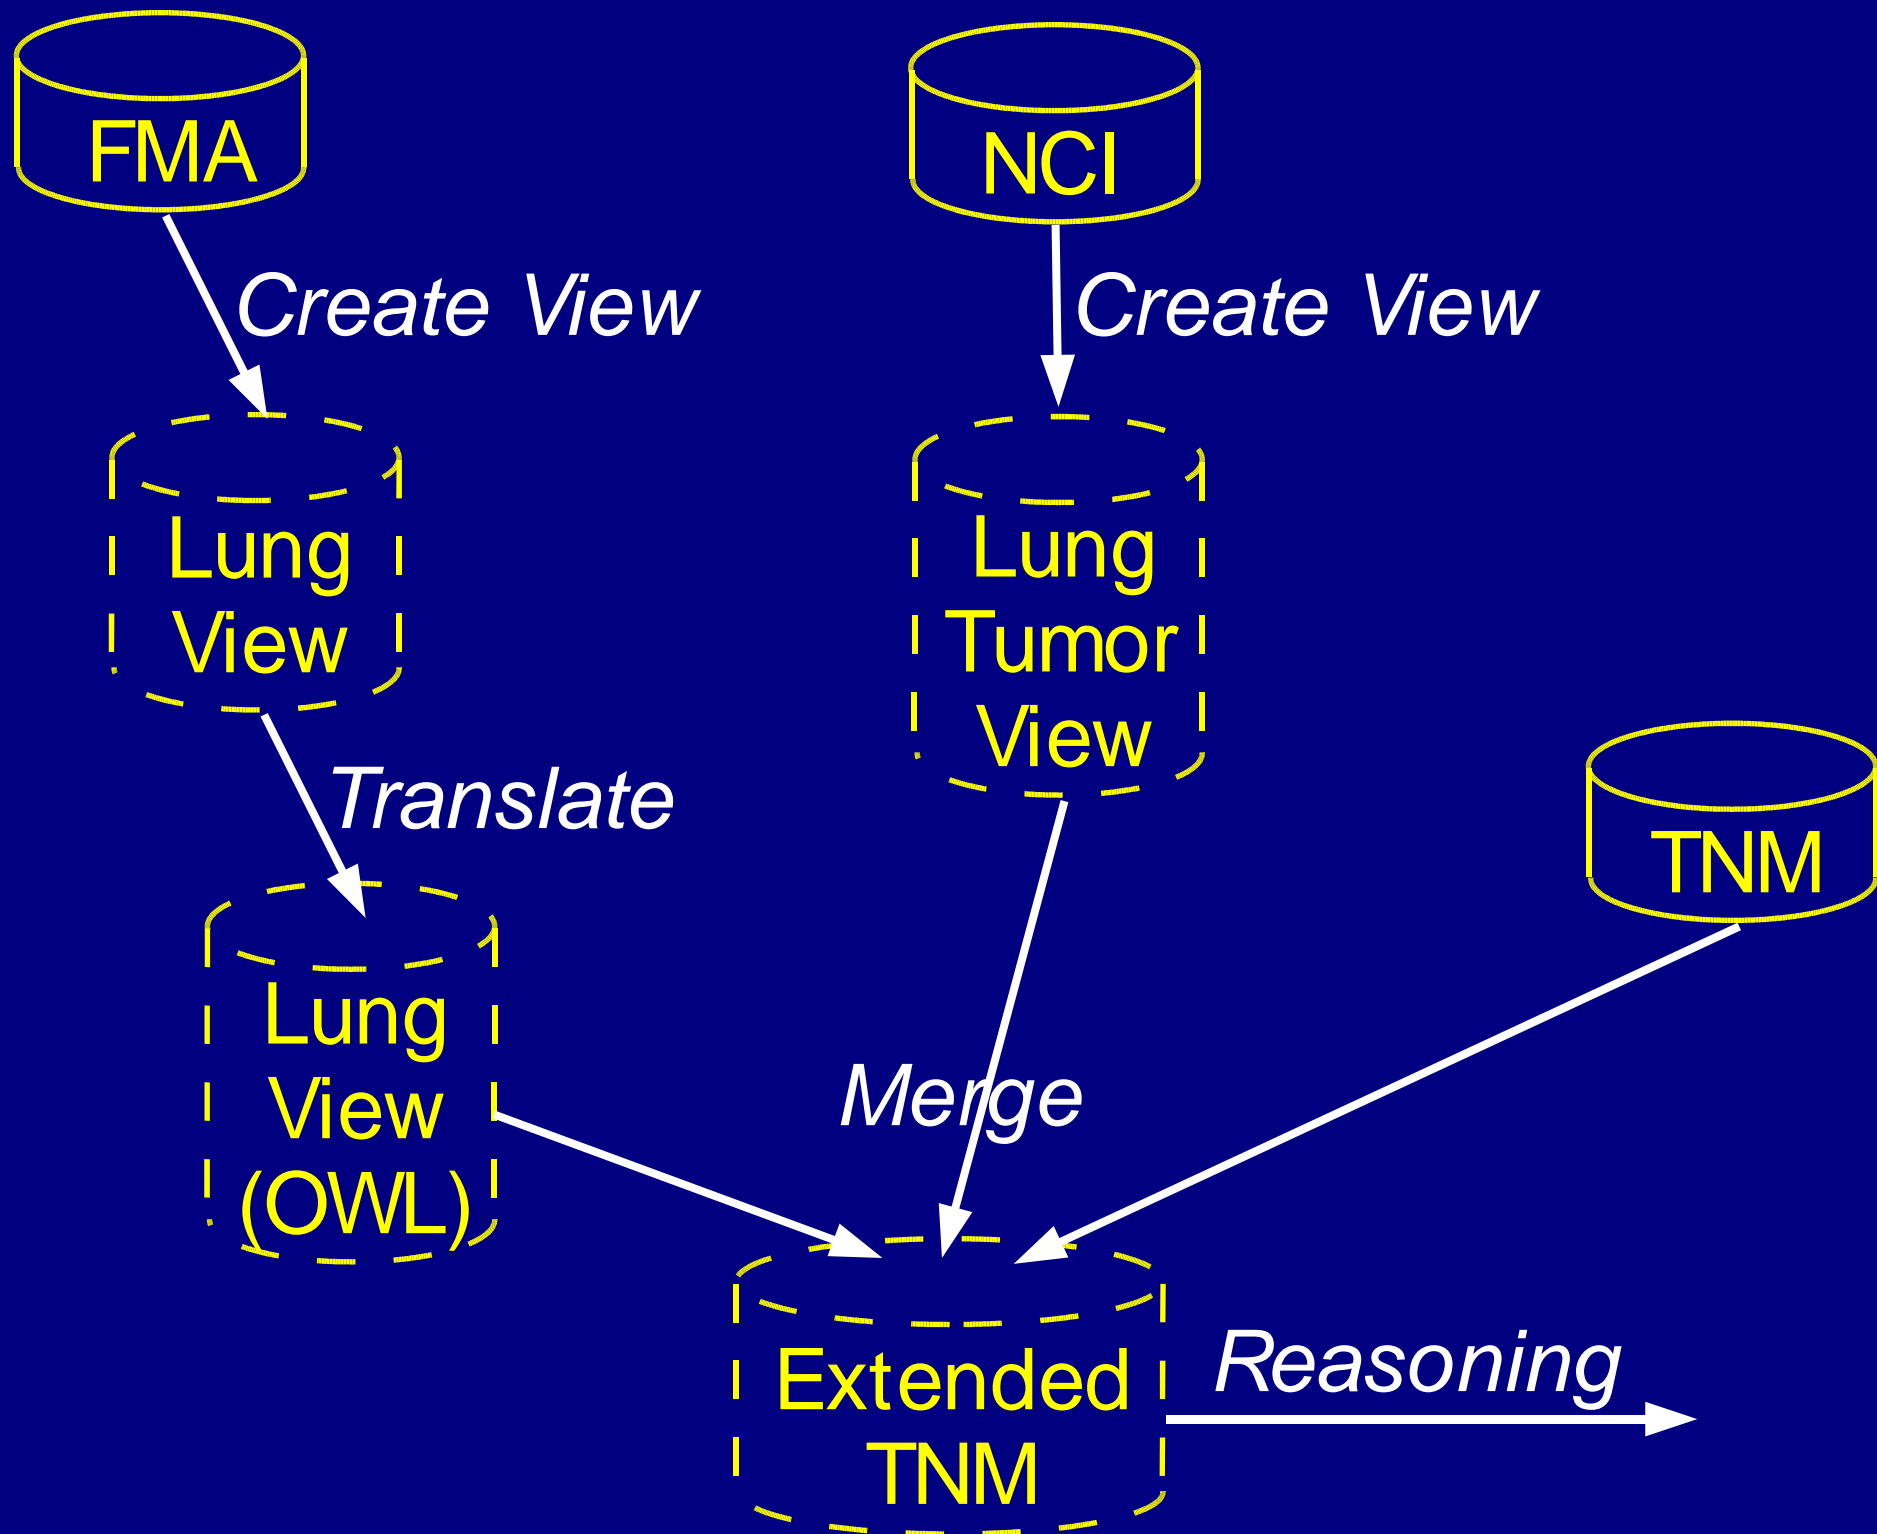

- TNM:
  - T0 – T4: primary tumor
  - N0 – N3: metastasis in lymph nodes
  - M0 – M1: distant metastasis
  - Stage 0 - IV: derived from the TxNyMz score
- Requires:
  - Representation TxNyMz criteria + stages
  - Taxonomy of tumors + pathologies
  - Taxonomy + paronomy of anatomy

# TNM classification

- **TNM:**
  - T0 – T4: primary tumor
  - N0 – N3: metastasis in lymph nodes
  - M0 – M1: distant metastasis
  - Stage 0 - IV: derived from the TxNyMz score
- **Requires:**
  - Representation TxNyMz criteria + stages
  - Taxonomy of tumors + pathologies
  - Taxonomy + parontology of anatomy

**NCI**

**FMA**

# OWS for the Semantic Web

- Automating usage of WS
  - discovery
  - execution
  - composition
- Requires explicit description
  - syntactically valid communication: SOAP, WSDL
  - semantic aspect: **OWL-S**
- How do apps automatically access and process semantic descriptions ? **OWS**

# OWS for assessing WS relevance

# OWS for assessing WS relevance

# Conclusion

- Life Sciences: privileged domain
  - $\exists$  ontologies
  - $\exists$  application needs
  - commercial opportunities
- Use of OWS for linking isolated resources
- OWS also play a role in the SW development
