Participant's interest in the workshop

Interest in ...

- Television Control Device
- Device APIs for Television
- Web and Broadcasting Convergence

Television Control Device

- A remote control should work with any television in any country.
 - necessity is not in the remote control of each device.
 - The protocol between a remote control and a television should be standardized.
- Controlling a television by a game controller is awesome.
 - However, game controllers have few buttons...
 - Display a control panel on television as a web page and control the cursor by game controller.

Device APIs for Television

- The television will become a full-screen web browser.
 - It displays both a control panel and TV programs.
 - They are a web page which has URI.
- Tablet devices can control a television by displaying its control panel on it.
- Mobile phones also can control a television but the UI might be different one.
 - The user is accustomed to the operation of the mobile phone.
- 3rd party's developer can be enhanced is very interesting.

Web and Broadcasting Convergence

- There are needs of viewing television programs on PC.
- Extending the video tag to enable to display TV programs on the web browser.
- Region control will be required.

ex) HTML5 video tag extension

```
<video>  
  <source src='tv:1ch'/>  
</video>
```
