Web & Home Networks

- Service Providers (SP) have a need to offer premium content from cloud as well from within home (e.g. DVR content)

- SPs looking at HTML5 to provide consistent user interface to provide seamless access to both cloud & in-home content.

- Consumers seem to be interested in the flexibility and convenience offered by "Play To" scenarios offered by DLNA
  - Content selection on device A, but rendering on device B

- Web & TV IG needs to address such scenarios

- DLNA offers functions complimentary to W3C
  - Interoperability guidelines at all layers of OSI for different device types, certification & logo program, etc.

- Active SP participation in DLNA

- Collaboration between W3C & DLNA beneficial to industry
