**Mirroring opportunities with Planet Mirror**

Planet Mirror would like to mirror your software, files and updates for free.

Absolutely free. There are no catches.

Planet Mirror is one of the worlds' largest and most frequented archives of:

- Linux
- Games
- Patches
- Drivers
- Applications
- Free and Open Source software
- A huge range of commercial software.

Our raison d'etre is file delivery.  If there's a file required by any userbase, that userbase can freely ask Planet Mirror to add it to our archives.

Planet Mirrors stats are phenomenal:

- In operation for over 5 years
- 6 Terabytes of online storage
- Delivered over 5 Petabytes of data since 1 June 2002
- Over 5 million applications and files are archived
- Over 250 million large files delivered in the last year

**Each day, Planet Mirror delivers in excess of 2 Terabytes and 800,000 files to over 500,000 people.**

Many large commercial operations rely on Planet Mirror to invisibly support millions of their users.

In short, there is nothing Planet Mirror can't handle.

Planet Mirror offers significant major benefits to your business:

- Free exposure to millions of our customers who use Planet Mirror as their primary download source.
- Free hosting of all your files
- Free up your own bandwidth and save a fortune on ISP fees
- Free your web servers to concentrate on delivering pages: not documents and files
- Automatic updates up to 4 times per day
- You receive a directory and you may link to files directly
- You can point the download link on your own site to ours
- Use Planet Mirror to aid in peak image delivery for your email newsletters
- Handle traffic bursts – use Planet Mirror as a load balancing tool

*As a thought exercise, imagine your ISP savings and increased website performance if all your files were served FREE by someone else.*

If you'd like to proceed with us setting up a mirror, we only need some simple details:

- The location of your archive
- How much disk space is required for the full file archive?
- How much is this expected to grow?
- What would be the best method for us to mirror you? We prefer to use Rsync if possible, but can discuss other options.

Web users have a deep trust Planet Mirror, and if you'd like to leverage our trust, please take our logo and place it on your downloads page.

**Remember, mirroring is ABSOLUTELY FREE.**

We look forward to serving you!

**Comparison Table of Planet Mirror Services**

|  | **Planet Mirror - Mirroring** | **Planet Mirror - Pro Hosting** |
|---|---|---|
| Free | Yes | A small fee applies |
| Saves you bandwidth | Yes | Yes |
| Redirect requests to a webpage * | Yes | Files may be directly downloaded |
| Updates per day | 4 | Set your own frequency |
| 24 * 7 monitoring | Yes | Yes |
| Host images | No | Yes |
| Can force an update | No | Yes |
| Logging and reporting | No | Yes |
| Advanced DNS services | No | Yes |

- When files are requested directly from an external source (e.g. to /something/download-me.exe), the request is changed to a regular webpage. The file is subsequently offered for download 5 seconds after the display of the page.

- Pro Hosting requests can be made directly, so Planet Mirror is transparent and invisible to your sites users. There is no delay.
