

Error XTDE0045

When a stylesheet is invoked using apply-templates invocation, the conditions in the following table must be satisfied, otherwise error XTDE0045 occurs:

	initial mode = named mode M	initial mode = unnamed mode
declared-modes=yes	There must be an xsl:mode declaration for mode M and its visibility must be public/final.	There must be an xsl:mode declaration for the unnamed mode in the top-level package.
declared-modes=no	One of the following must be true: (a) there is an xsl:mode declaration for mode M and its visibility is public/final, or (b) mode M is implicitly declared by virtue of the presence of an xsl:template with mode="M".	Always allowed. (The unnamed mode always exists in a package even if it is not declared and contains no template rules.)
