

Advanced Inline Attributes - Line Break Control

This text tests line splitting capabilities of the formatter.

Word boundaries

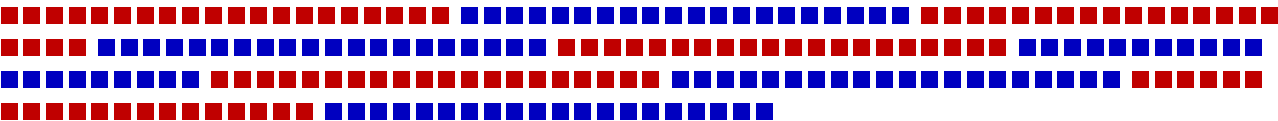

In the following paragraph, words should not be split by line breaks, nor the brackets should be detached from the words.

[unbreakable] (character) {cOncatEnations} [unbreakable] (character) {cOncatEnations}
[unbreakable] (character) {cOncatEnations} [unbreakable] (character) {cOncatEnations}
[unbreakable] (character) {cOncatEnations}

keep-together.within-line attribute

In the paragraph below, no constraint is set on the line breaks: they may occur between any space-separated elements.

Line breaks can split sentences. Line breaks can split sentences. Line breaks can split sentences. Line breaks can split sentences. Line breaks can split sentences. Line breaks can split sentences. Line breaks can split sentences. Line breaks can split sentences. Line breaks can split sentences. Line breaks can split sentences.

In the next paragraph, line breaks may occur **only between inline elements of different colors**

Line breaks should not split sentences. Line breaks should not split sentences. Line breaks should not split sentences. Line breaks should not split sentences. Line breaks should not split sentences. Line breaks should not split sentences. Line breaks should not split sentences. Line breaks should not split sentences. Line breaks should not split sentences. Line breaks should not split sentences.
