to the cloud

COLLABORATE

quick and easy grid-view editing

AUTOMATE

powerful customizable workflows

INTEGRATE

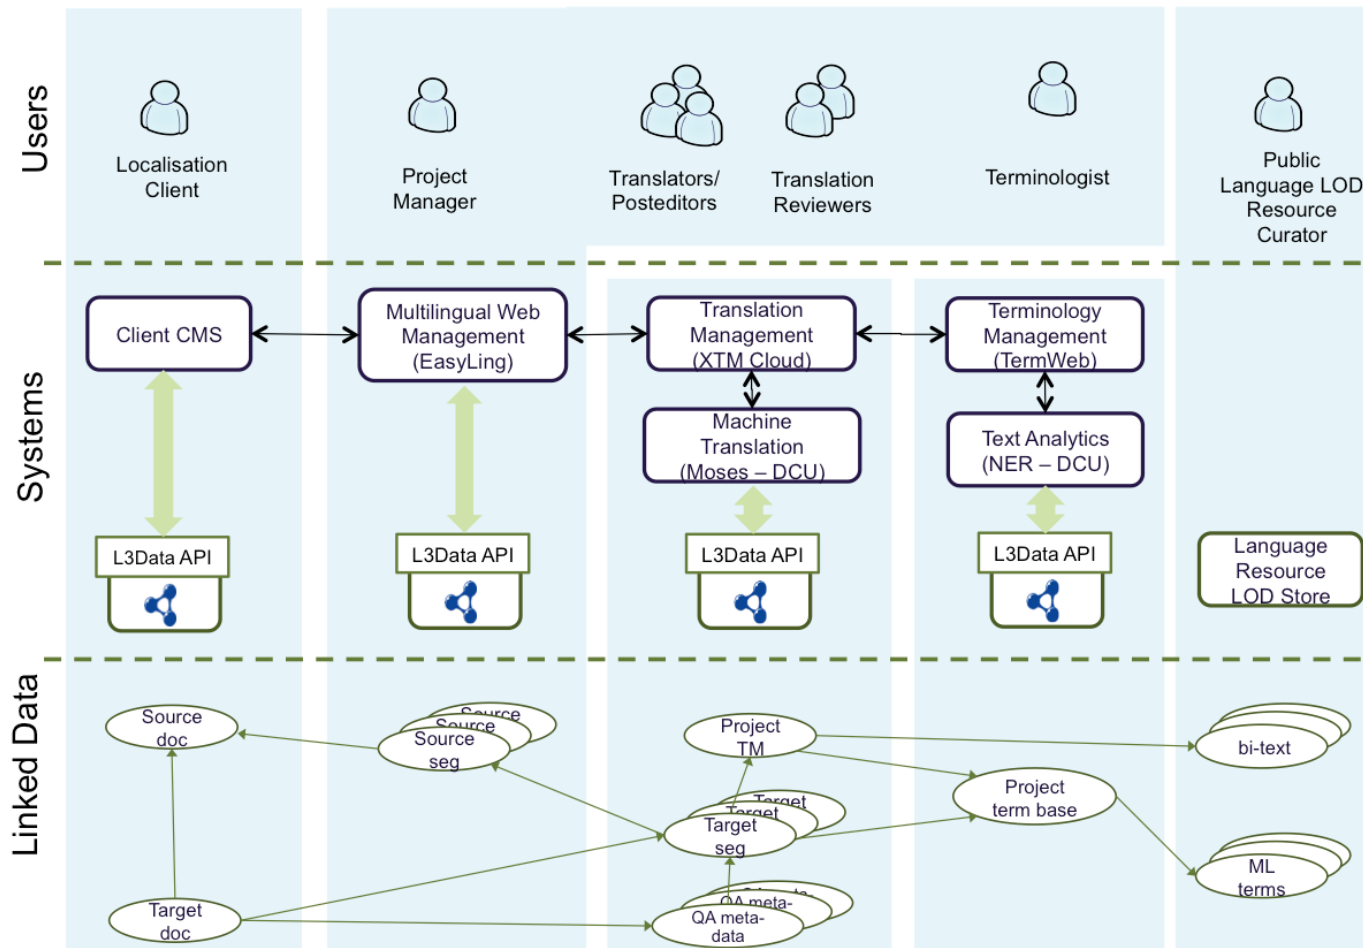

cross-system communication by TermWebIntegrator

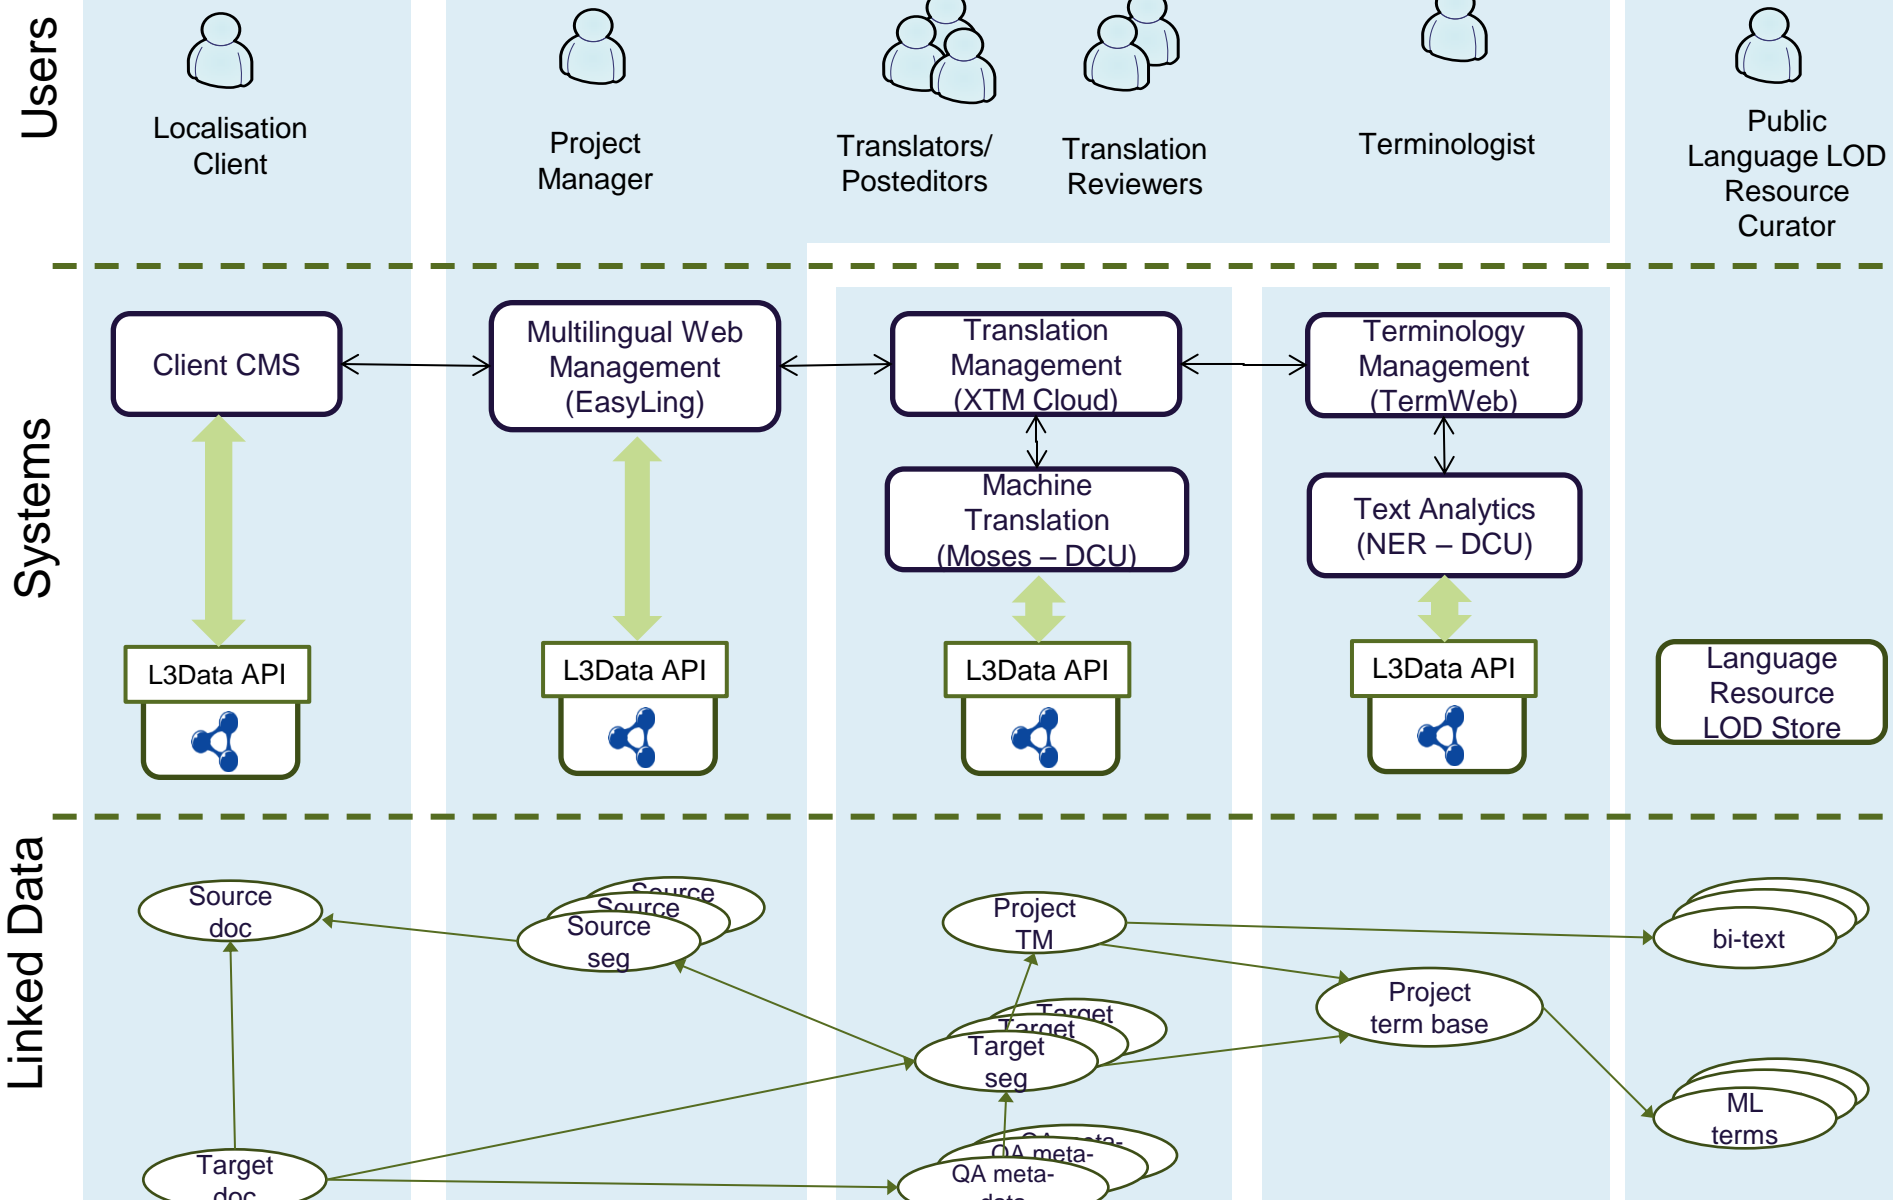

EMBELLISH

full media support

EVOLVE

platform-independent, cloud-based, uniquely versatile

Important benefits

- Easy integration of TermWeb with FALCON-compatible tools. No need for developing and maintaining custom APIs and connectors
- Corporate users can share termbases in an instant and in a controlled way
- Linking into public termbases such as BabelNet directly from TermWeb makes searching in a variety of termbases easy
- Language Resource Publishers can audit links for building termbases and track the ROI
- SME LSPs gain resource sharing and pooling opportunities that avoid lock-in
- LSPs and clients can use Active Curation to quickly train domain specific SMT and text analytics components
- As termbases and other language resources continuously increase in volume, linking is the only realistic option for proper management and distribution

Integrates with most content and translation management systems...
