

SWAD
Europe

<http://www.w3.org/2001/sw/Europe/>

How can I get involved in building the Semantic Web?

Which standards could I use? What standards are available?

Where can I find other Semantic Web developers in Europe and the world?

SWAD-Europe is a European funded project aiming to ensure that the critical technology components required for widespread Semantic Web adoption are readily accessible to European industry, consumers, and developers.

Our goal is to support and field-test Semantic Web standards using Open Source tool development, community building, outreach and evangelism, and advanced research and analysis.

Our current activities include:

- bridging the gaps between Semantic Web tools and XML tools
- reviewing and developing tools for accessing, storing and searching Semantic Web data
- developing case studies and demonstration applications in areas ranging from thesaurus management to semantic blogging
- developer workshops on topics ranging from image annotation to calendaring

For more details on the full range of our activities visit <http://www.w3.org/2001/sw/Europe/> or join us on the public-esw@w3.org mail list, the ESW Wiki, or on IRC ([irc.freenode.net #rdfig](irc://irc.freenode.net/#rdfig))

This postcard was generated using SVG and RDF descriptions of Semantic Web developers and groups in Europe. See the website for more information on how it was made and how to be added.
