

The Web: From Fixed to Mobile to Ubiquitous Progress Report 2007

Presentation at CTIA Wireless 2007
Orlando, Florida, USA
26 March 2007

Steve Bratt (steve@w3.org)
Chief Executive Officer
World Wide Web Consortium
<http://www.w3.org/>

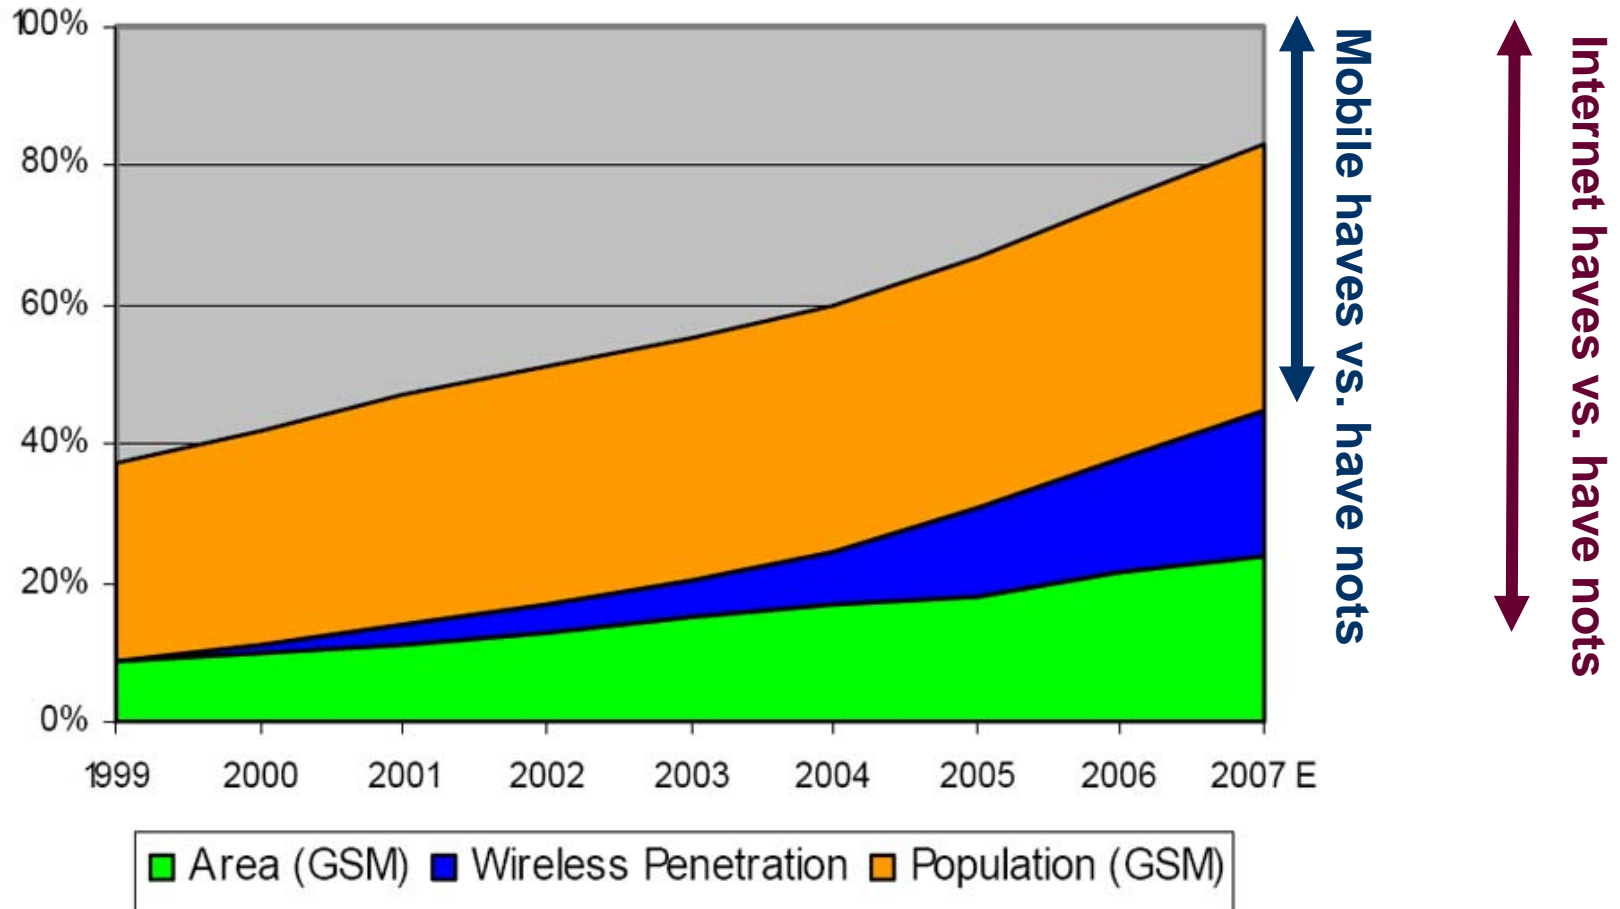

Internet Growth Driven by Open Web

Number of Web Sites (domain names and content)

Internet Users in early 2007 ~ 1,100 mil

Mobile Growth and Potential

Mobile Web Closes the Gap

The Challenge ...

- People want – **expect** – no-hassle, Web access across all of their devices ... including their phones
- This requires:
 - Seamless interoperability
 - Ease of use
 - Safety

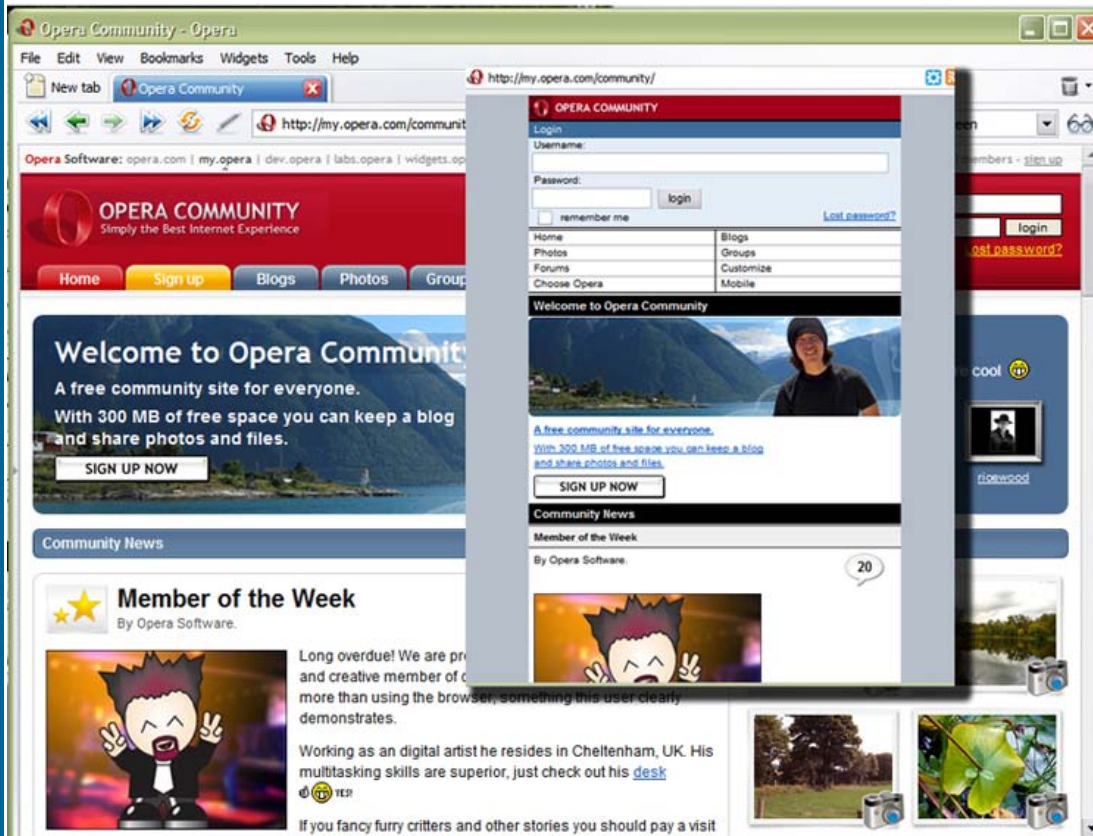

W3C Standards Address Challenges

User Requirements	W3C Solutions
<i>User-friendly content</i>	Mobile Web Best Practices*
<i>Effective adaptation</i>	Device Description* Ubiquitous Web*
<i>Child protection, labeling</i>	Protocol for Web Description*
<i>Ease of discovery, trust</i>	mobileOK*
<i>Voice, stylus, keys</i>	VoiceXML, Multimodal
<i>Universality</i>	WAI, I18N, Developing World*
<i>Security</i>	Browser Security Context
<i>Interoperability</i>	Web standards: XHTML, CSS, Graphics, Forms, AJAX, Widgets, Ubiquitous Web* , etc.

Mobile Web Initiative

- Mobile Web Best Practices 1.0
 - Authoring content for **good user experience**
 - Effective delivery to and display on mobile devices
 - Leveraging existing Web standards
- Informed by existing guidelines
- Checker: <http://www.w3.org/Mobile/check>
- New Browser Test Suites Working Group

60 Mobile Web Best Practices

- Thematic consistency:
 - One Web (URIs)
- Layout
 - use CSS; no tables or frames
 - Small (text, pics) is beautiful
- Navigation:
 - important info at top
 - access keys
- Users on the go
- Summary

MWI Best Practices in Practice

- Recommended in developer material
 - [Google mobile Webmaster FAQ](#)
 - [Orange Partner Program](#)
 - [.mobi "switch on" guide](#)
- Integrated into development tools
 - [Wordpress plugin for BP-ok blogs](#)
 - [Mobisitegalore](#)

MobileOK Trustmark & Discovery

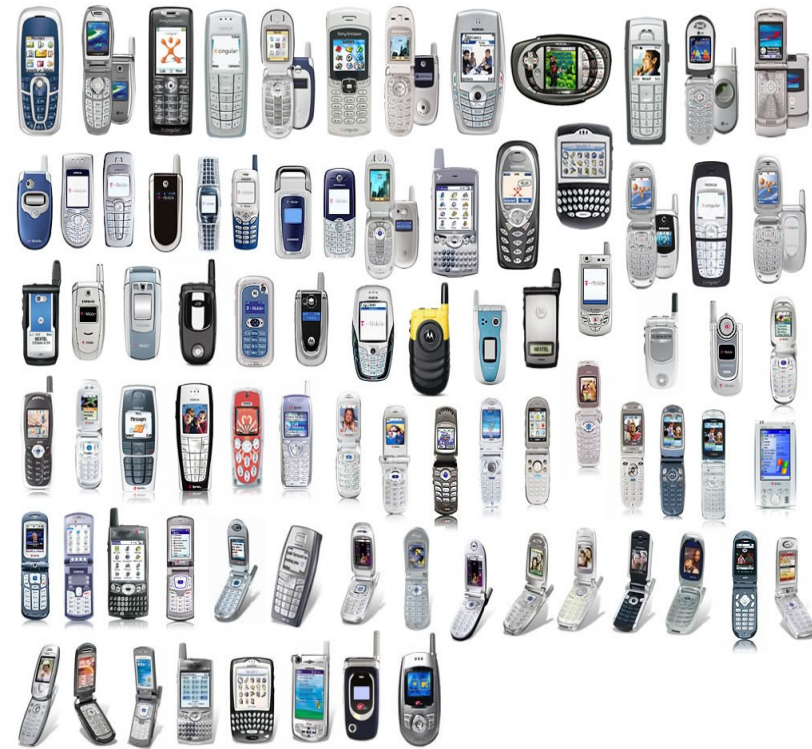

- mobileOK Basic
 - Defines tests for Web content
 - Subset of Best Practices
 - Machine-testable
- mobileOK full (under development)
 - Includes non-machine testable tests
- Third-party or self-certification
- Metadata for consumption by search engines, filters, etc.

mobileOK

Mobile Web Device Description

- Content adaptation requires knowledge about device, environment, preferences
- Completed:
 - Landscape and Ecosystem
 - Requirements for open Device Description Repositories
- Started in Dec 2006:
 - Core and API for Repository
 - Key device properties, vocabulary, method for extensions

Content Labeling

- Started Feb 2007: Protocol for Web Description Resources (POWDER) Working Group
 - Web-wide, structured, descriptive metadata
 - Supports authentication
 - Can get description resources separate from Web resources they describe
- Application areas of initial interest:
 - mobileOK, child protection, accessibility, search, etc.

Web Mobility = Web for Emerging Economies

- The Mobile Web will accelerate Internet access around the world by solving the "last kilometer" problem
- Commerce, healthcare, education, eGov, communication ... [ex: [der Spiegel](#)]
- [W3C Workshop on the Mobile Web in Developing Countries](#), Dec 2006, Bangalore

What's Next?

Ubiquitous Web Applications

- Enabling Web applications to interact across wide diversity of devices:
 - Computers, equipment, media, appliances, mobile devices, physical sensors, effectors, consumer electronics
- Deliverables ... standards for:
 - Device independent authoring
 - Delivery contexts
 - Remote eventing, device coordination
- Under consideration by Members

Sponsors and Supporters of Mobility and Ubiquity Standardization @ W3C

Additional, Key Participants: Alcatel-Lucent, AOL, AT&T, BT, Citigroup, El Mundo, FOSI, Google, Hutchinson 3, IBM, Intel, Microsoft, OMA, Openwave, Samsung, Siemens, SK Telecom, Sun, T-Online, Telefonica, many others.

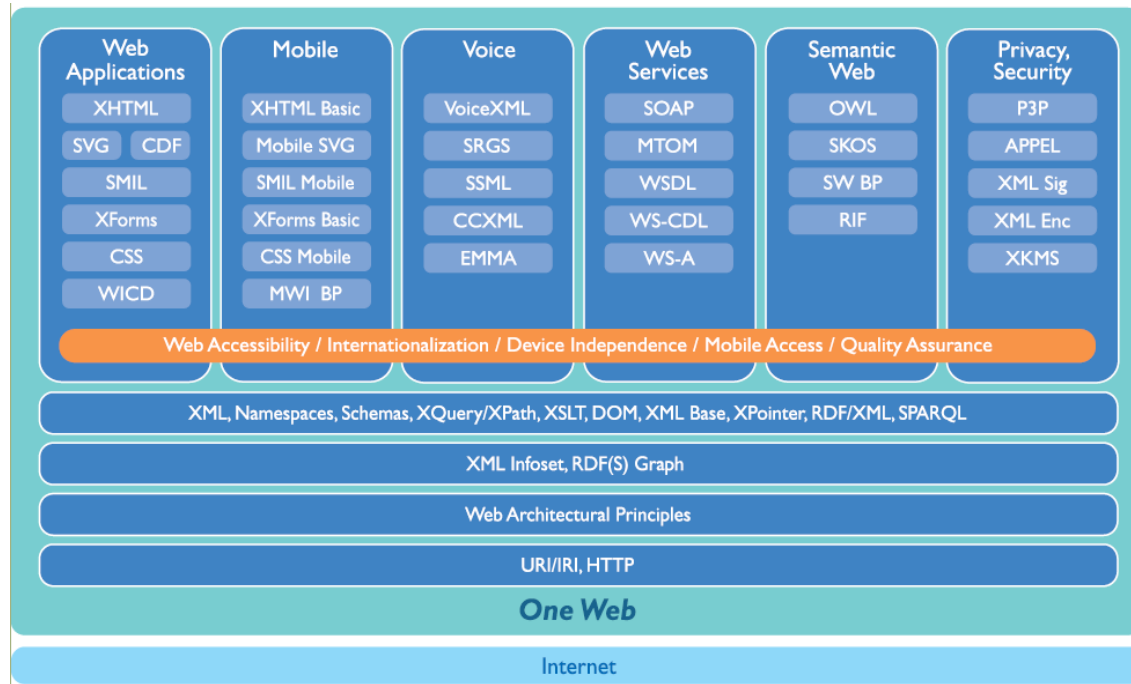

Questions Comments ?

Extra slides follow

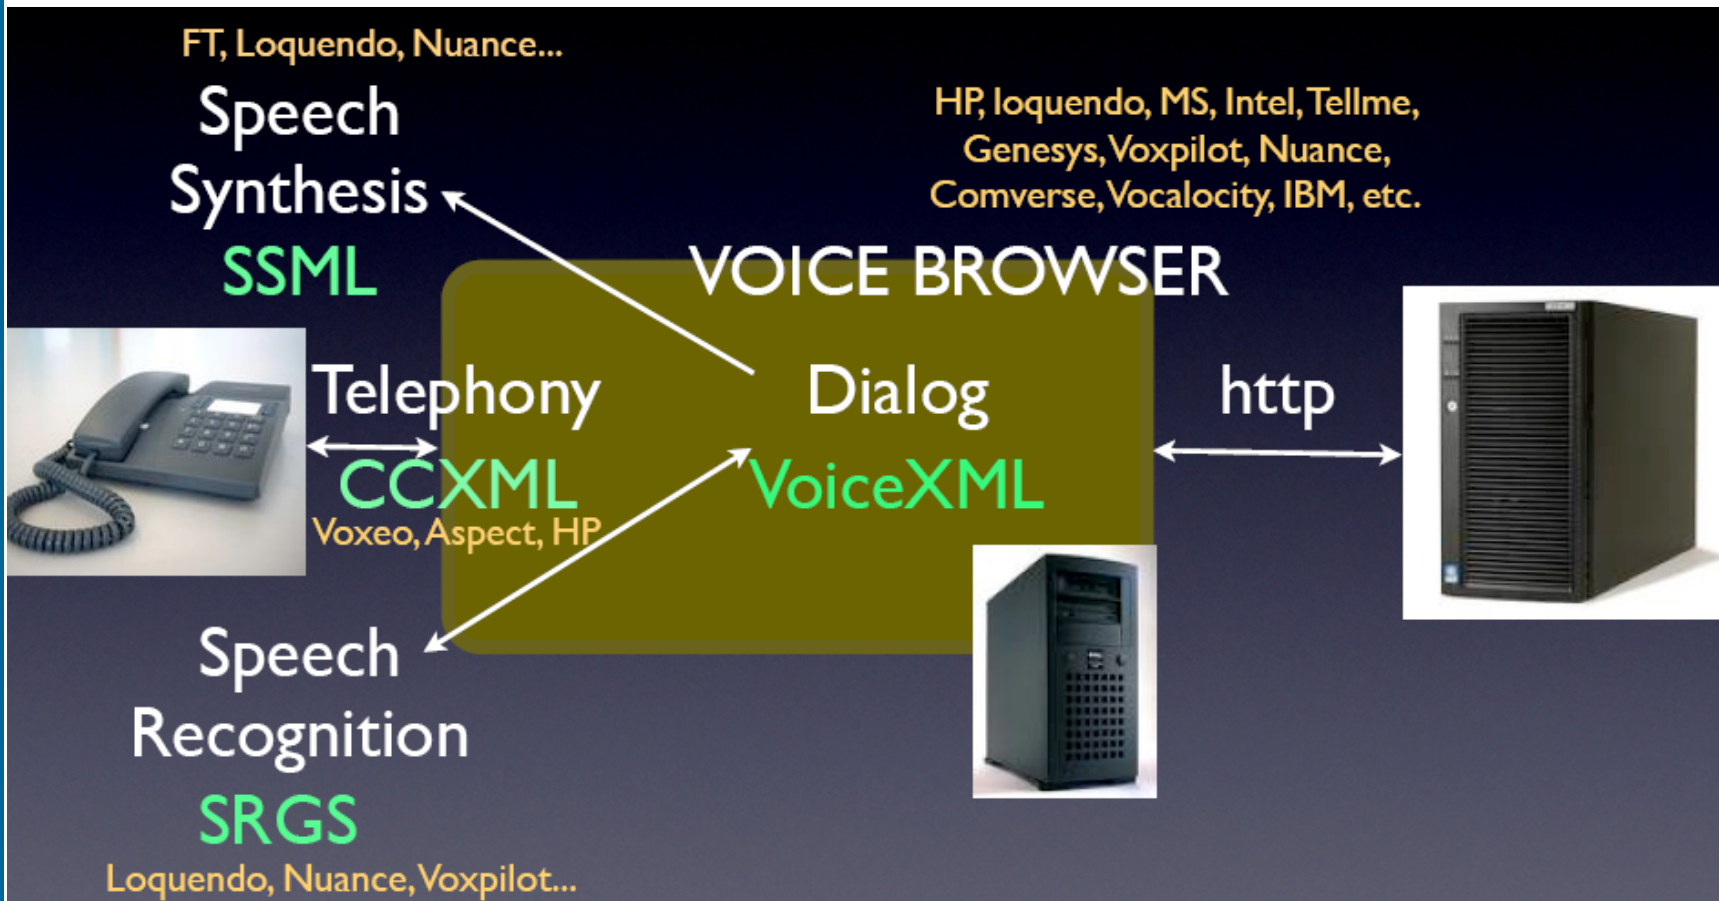

The Leading Web Standards Organization

- Engineering the Web's foundation
 - (x)HTML, XML, CSS, VoiceXML, Web Services, Semantic Web, Security, Accessibility, Internationalization, Privacy, Architecture
- 440 Members
- 40+ Liaisons
- 20 Offices
 - Newest: India, China, S. Africa

<http://www.w3.org/>

Voice Browser @ W3C

Accessibility @ W3C

- W3C's Web Accessibility Initiative
 - Multi-stakeholder development of int'l standards
 - Content, authoring tools, user agents
 - Education and outreach to organizations, govts.
- Web Content Accessibility Guidelines 1.0
 - W3C standard since 5 May 1999 (Quicktips)
- Web Content Accessibility Guidelines 2.0
 - Standard planned for completion in next 6 -12 mo.
 - Broader range of Web technologies. More testable.

Security @ W3C

- W3C's Security Activity
 - Seeking practical standards to address most pressing problems
- New Web Security Context Working Group
 - Planned during workshop w/ major browser, security, financial services companies
 - Usable, mutual authentication
 - ... e.g., "secure letterhead", "petname", padlock use, certificates, etc.
 - Forms annotation (in HTML WG) = important complement
 - Starting to gather use cases
- New Maintenance Group?
 - for core Web security standards for signature, encryption, key management

Rich Web Clients / Web 2.0 @ W3C

- Mature W3C standards (plus javascript) enable Web 2.0
 - New HTML WG bringing most important spec up to date
 - DOM, CSS, SVG, etc.
- New Rich Web Clients Activity, is standardizing:
 - AJAX (XMLHttpRequest object), and other JS features, libraries
 - Languages to support app development (e.g., Widget packaging and delivery format)
- Coordinating with browser developers to enable more secure application environment
 - e.g., standard for site to declare that its data are available to any javascript application (or not)

(little AJAX/SVG-based demos: XMLHttpRequest playlist, fatcats, cubes)
