

Web and TV Interest Group Intro

Co-chairs: Yosuke Funahashi - W3C
 Giuseppe Pascale - Opera Software
 Mark Vickers – Comcast

Team Contact: Kazuyuki Ashimura – W3C

Web & TV IG: Charter

- Scope

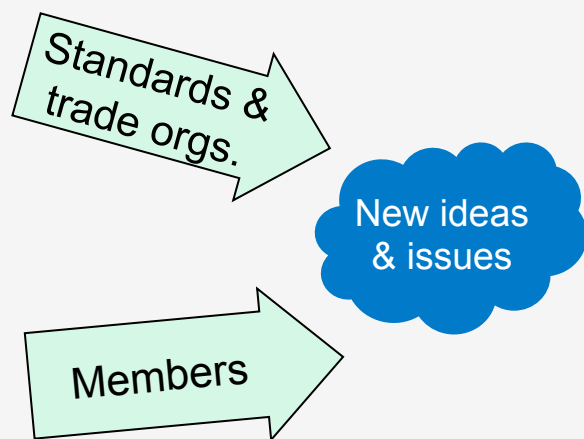

- “**Web-based media distribution** which is currently done by media services over a variety of distribution channels (IP, satellite and terrestrial broadcasting, cable, telecomm, etc.) to a variety of devices (TV-sets, phones, tablets, PCs, game machines, etc.).”

- Tasks

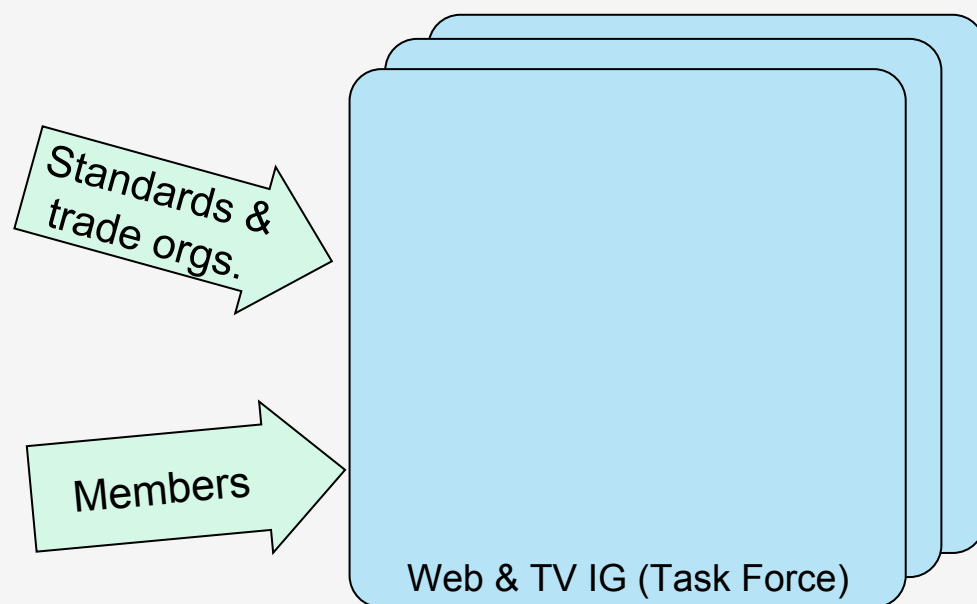

- Identification of **requirements** for tighter support of media-centric applications on the Web Platform
- Identification of **gaps** in the Web Platform that do not allow the identified requirements to be met
- **Review of deliverables** under development by other W3C groups that are relevant to the IG scope and report bugs as appropriate
- **Liaison with other organizations** in the media industry to promote adherence to W3C standards within global media specifications.”

Media Pipeline TF (closed)

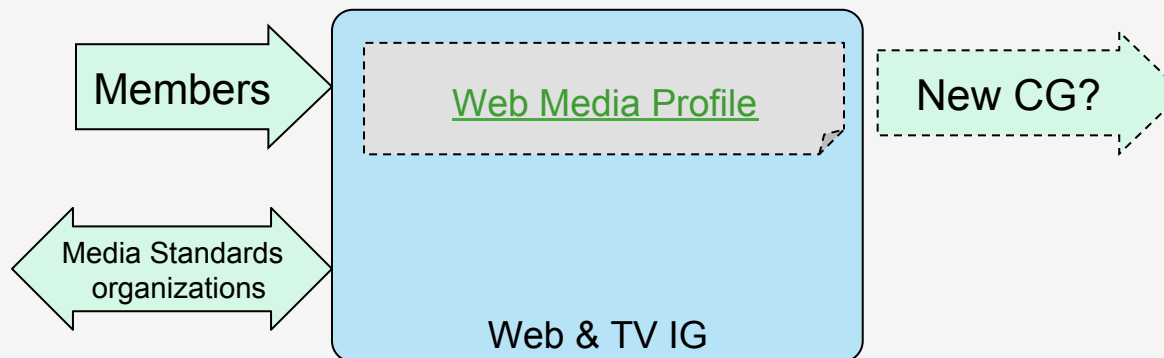

- Goal: Improve HTML5 media pipeline to support media services
- Outcome:
 - [IG Bug reports](#) addressed. HTML5 is a W3C Recommendation, wide browser support
 - MSE (Media Source Extensions): Candidate Recommendation, wide browser support
 - EME (Encrypted Media Extensions): Working Draft, wide browser support
 - IG members form new CG: [Media Resource In-band Tracks CG](#)
 - *Sourcing In-band Media Resource Tracks from Media Containers into HTML* referenced by HTML5 & MSE

Media Pipeline TF (closed)

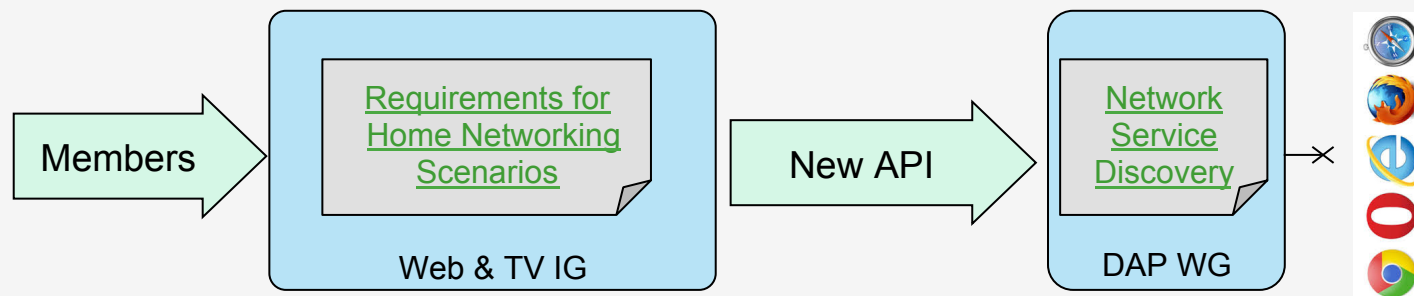

- Goal: Improve HTML5 media pipeline to support media services
- Outcome:
 - [IG Bug reports](#) addressed. HTML5 is a W3C Recommendation, wide browser support
 - MSE (Media Source Extensions): Candidate Recommendation, wide browser support
 - EME (Encrypted Media Extensions): Working Draft, wide browser support
 - IG members form new CG: [Media Resource In-band Tracks CG](#)
 - *Sourcing In-band Media Resource Tracks from Media Containers into HTML* referenced by HTML5 & MSE

Web Media Profile (on hold)

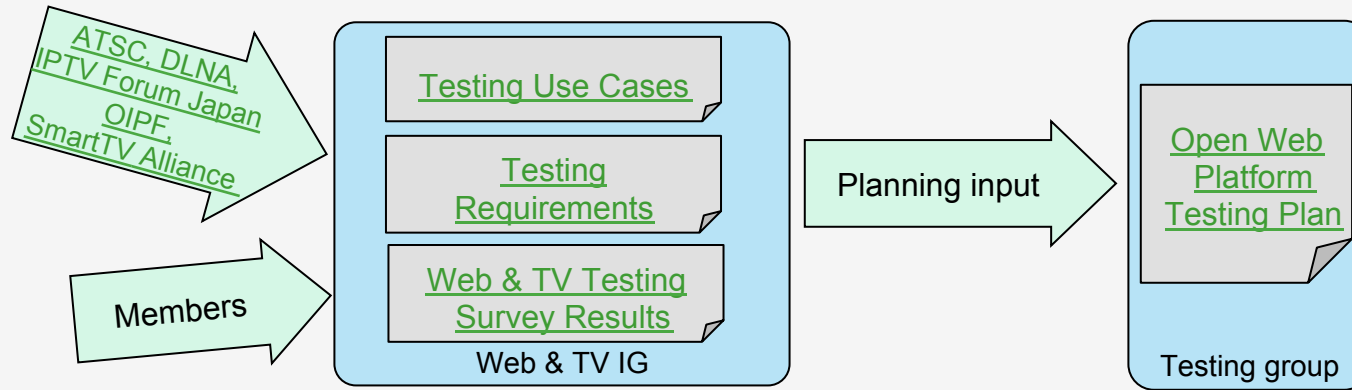

- Goal: Create profile of HTML5 specs to support media applications
- Outcome & status:
 - Draft [Web Media Profile](#)
 - Put on hold because at the time (2011):
 - a. HTML5 and related specs changing too rapidly
 - b. Media standards organizations interested in HTML5 not public
 - Now HTML5 foundation is stable & media standards groups are more open
 - Is it time to restart the Web Media Profile?

Home Network TF (closed)

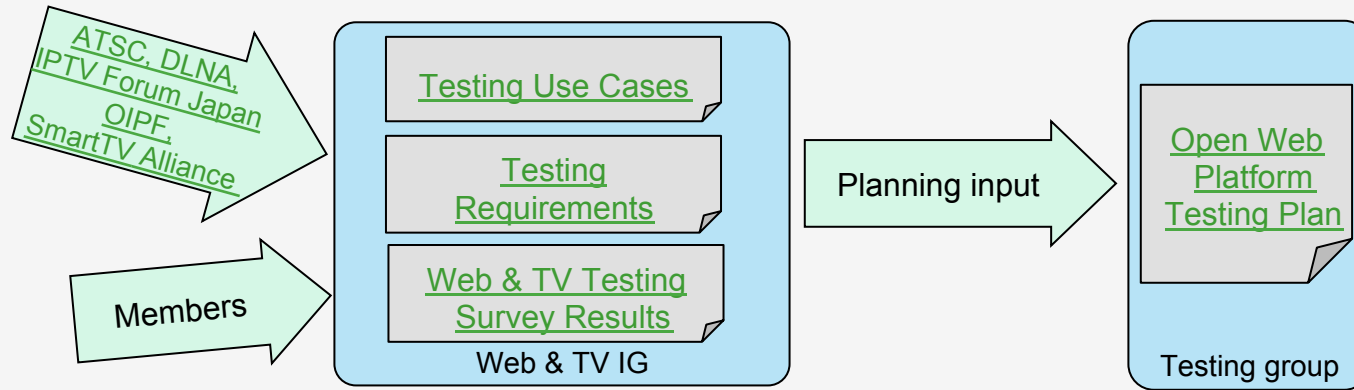

- Goal: Enable discovery & control of devices & services on the LAN
- Outcome:
 - Use cases and requirements for potential specifications
 - Network Service Discovery API (Working Draft)
 - Security/privacy concerns raised by Privacy IG (PING), some
 - Status: No browser implementations

Testing TF (closed)

- Goal: Improve HTML5 platform test coverage.
- Outcome:
 - 10 external organizations surveyed, 5 returned survey
 - Use cases & requirements completed
 - Reports delivered to Testing group

Testing TF (closed)

- Goal: Improve HTML5 platform test coverage.
- Outcome:
 - 10 external organizations surveyed, 5 returned survey
 - Use cases & requirements completed
 - Reports delivered to Testing group

Timed Text TF (closed)

- **Goal:** Facilitate use and interoperability of TTML and WebVTT
- **Outcome & status:**
 - Document scope and variations of TTML and WebVTT
 - Gather Web-based timed text use cases from the TV and Media industry & IG members
 - Delivered IG Consensus Input to Timed Text WG charter
 - New charter for TT WG (a) included both TTML and WebVTT (b) added a deliverable to create a mapping doc between TTML and WebVTT
 - *Mapping Between TTML and WebVTT* Editor's Draft

Media APIs TF (closed)

- Goal: Identify requirements for:
 - Recording and downloading media
 - Discovery and control of device capabilities (e.g. tuner control)
 - Exposing TV metadata to web applications
 - Mapping between Media Element API and in-band metadata
 - Synchronization of broadcast content and web applications up to frame accurate
- Outcome & status:
 - Started TV Control API CG, which produced [TV Control API Specification](#)

Glass to Glass Internet Ecosystem (GGIE) (active)

- Goal: Help standards organizations identify technical standards needs around:
 - media capture (professional cameras, smartphones)
 - media editing systems
 - media storage
 - media packaging
 - media providers (streaming media websites, cable, IPTV & satellite systems)
 - media clients (general-purpose browsers, televisions, tablets, phones)
- Outcome & status:
 - GIGIE Use Cases

Web & TV IG: State of HTML5 in Media Specs & Tech

Worldwide TV Standards support HTML5 (or plan to):

- ATSC 3.0
- DLNA VidiPath
- HbbTV 2.0
- MSIP Smart TV 2.0 (Korea)
- IPTV Forum Japan Hybridcast
- ...

Hardware support HTML5 (or plan to)::

- AMD
- ARM
- Broadcom
- Intel
- Marvell
- Mstar
- NXP
- Sigma
- ST
- ...

TV Platforms support HTML5 (or plan to):

- Android TV
- Firefox OS
- Opera TV
- Tizen
- WebOS
- ...

Content protection support EME (or plan to)::

- Adobe Access
- Alticast XCAS
- Apple Fairplay
- ARRIS SecureMedia
- Cisco VideoGuard
- Google Widevine
- Intel HDCP
- Microsoft PlayReady
- NAGRA Anycast
- Verimatrix VCAS
