Explore Open Video Annotation

Try it! Start annotating the video

Annotate and Share

Click the "Annotate" button to begin taking notes on the timeline. You can click and adjust the range slider handles to fine-tune the start and end times of your annotation. Enter your comment, add tags, keep the annotation private or share

Browse and Discover

Click the "View Annotations" button to browse and discover other annotations. Annotations are stacked chronologically. Scroll through annotations using the mouse scroll wheel or trackpad. Mouse-over annotation bars to reveal comments

Visualize and Analyze

Click the "Chart Annotation" button to visualize where the annotations are taking place on the video timeline. This view gives you a quick "temperature" read of where the commenting activity is happening on the video. It displays the

Treatment Plans

Plan 6 of 43 Antipletelet 2 Score (1 - 100)

no benefit seen with this drug in patients who undergo PCI causes it to be unused in this circumstance⁸

Therapeutic Monitoring for Anticoagulant:

Five minutes after the bolus dose has been administered, an activated clotting time (ACT) should be performed. If the ACT is less than 300, then an additional bolus of 30 mg IV should be given⁷

"at least"

hospital day one to achieve high blood concentrations and platelet inhibition starting on hospital day 2 and continue once daily indefinitely⁸ Since DB is thrombotic occlusion during the procedure and likely prevent thrombosis following the

white prasugrel 60 mg oral loading dose on hospital day one, then 10 mg by mouth daily starting on day 2 and continue for **at least** 12 months. Prasugrel has been shown to significantly reduce the frequency of cardiovascular death, stroke and MI.⁸ Patients with PCI for ST-elevation MI and those who have a history of diabetes mellitus (just like our patient DB) do not have the increased bleeding risk with prasugrel and have even greater benefit from this drug⁸ Prasugrel is a more potent platelet inhibitor than clopidogrel and has less CYP interactions, making this the drug of choice for our patient DB. Ticlopidine is not used because of the frequent monitoring it requires due to its propensity to cause neutropenia¹ The GP IIb/IIIa inhibitors eptifibatid and abciximab are not used because they should not be administered with bivalirudin due to the increased risk of bleeding⁸

Adverse Event Monitoring for Anticoagulant and Antiplatelets

The most common side effect seen with bivalirudin is back pain DB's blood pressure should be monitored while on this drug and should it fall significantly, a hemorrhage should be expected and immediate cessation of the drug should follow⁷ DB's hemoglobin/hematocrit, platelet count and any signs or symptoms of bleeding should be monitored. If bleeding is suspected d/c bivalirudin and consider blood transfusion⁷

Monitor for signs and symptoms of bleeding such as low iron, hypotension or bruising due to prasugrel's bleeding risk. If bleeding can be managed do not d/c. Only d/c when unmanageable. Monitor for signs and symptoms of angioedema (rapid swelling of tissues) which is a hypersensitivity reaction. D/c if angioedema is suspected. Another serious adverse reaction to

President Barack Obama – Statement on Section 215 Bulk Metadata Program

How do I create annotations?

Earlier this year in a **speech at the Department of Justice**, I announced a transition that would end the **Section 215 bulk telephony metadata program** as it previously existed and that we would establish a mechanism to preserve the capabilities we need without the government holding this **bulk metadata**. I did so to **give the public greater confidence that their privacy is appropriately protected**, while maintaining the tools our intelligence and law enforcement agencies need to keep us safe.

In that **January 17 speech**, I ordered that a transition away from the prior program would proceed in two steps. In addition to directing immediate
