

Integration of SRC payment method

WPWG remote meeting

March 31, 2020

Jonathan Grossar, Thomas Blachowicz

Objectives of the proposed approach for SRC integration

1. Enhance merchant and consumer value proposition

- Allow merchant to validate if SRC credentials are available with "Has Enrolled payment instruments"
- Allow user recognition without reliance on cookies with
 - Short term: "Indexed DB"
 - Longer term: other feature possibly implemented by browsers to provide more persistence
- Leverage PR shipping method functionality to update total amount

2. Provide an implementation that works for different types of browsers

- Browsers who do not play a specific role in SRC (SRCi/DCF)
- Browsers who play a SRCi/DCF role in SRC

3. Provide an implementation with choices for merchants

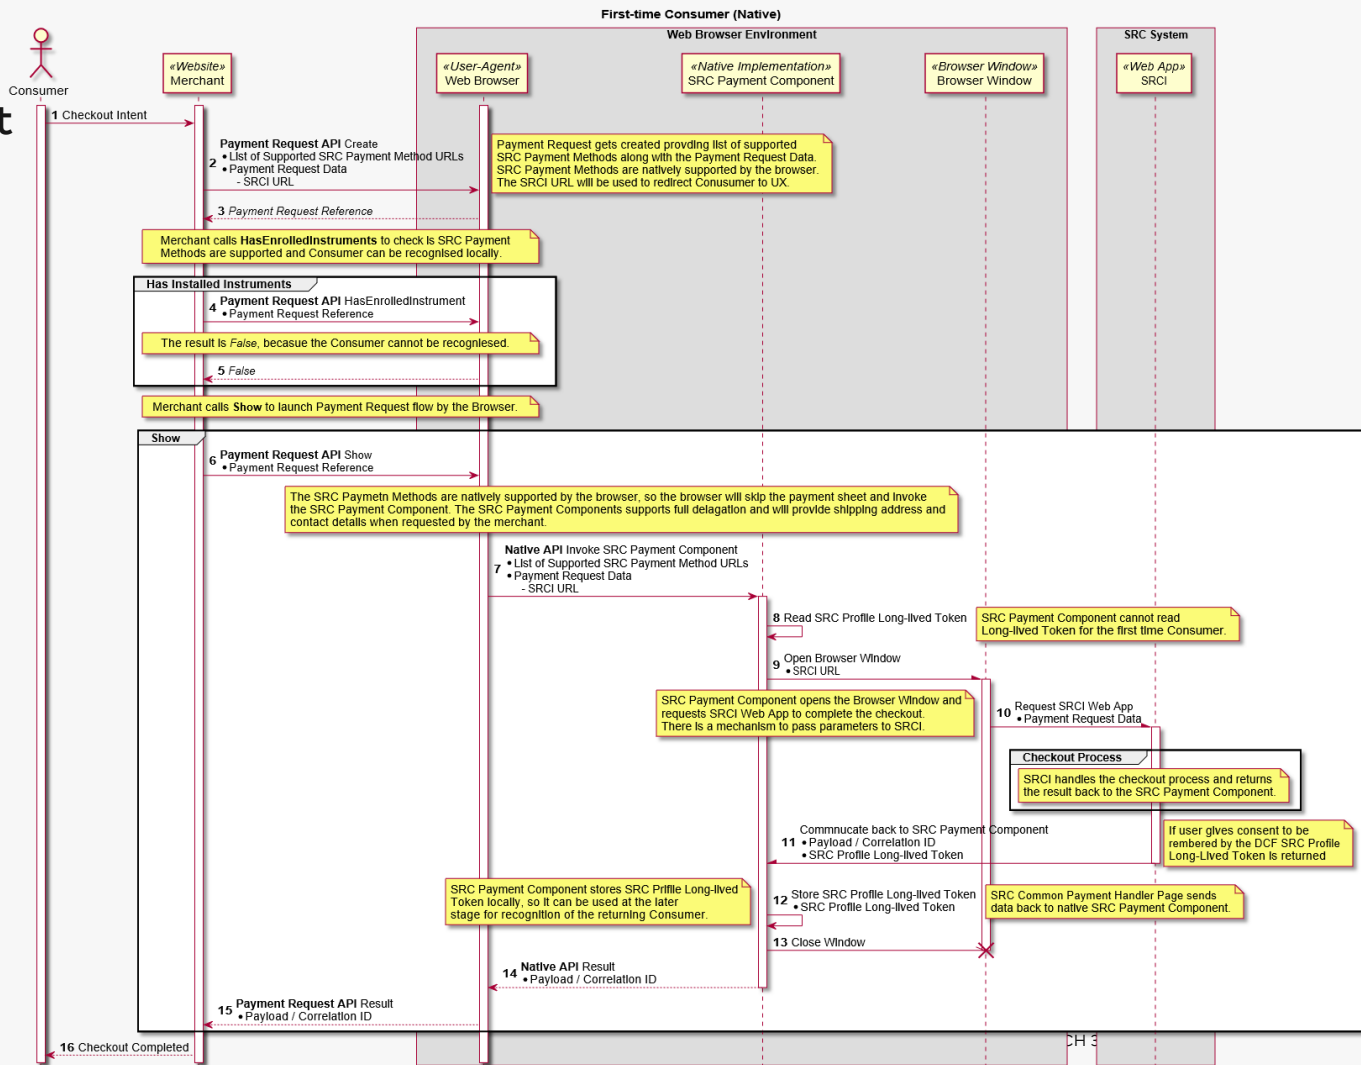

- Card list can be displayed after payment request is invoked
- Card list can be displayed before payment request is invoked (embedded within merchant page)

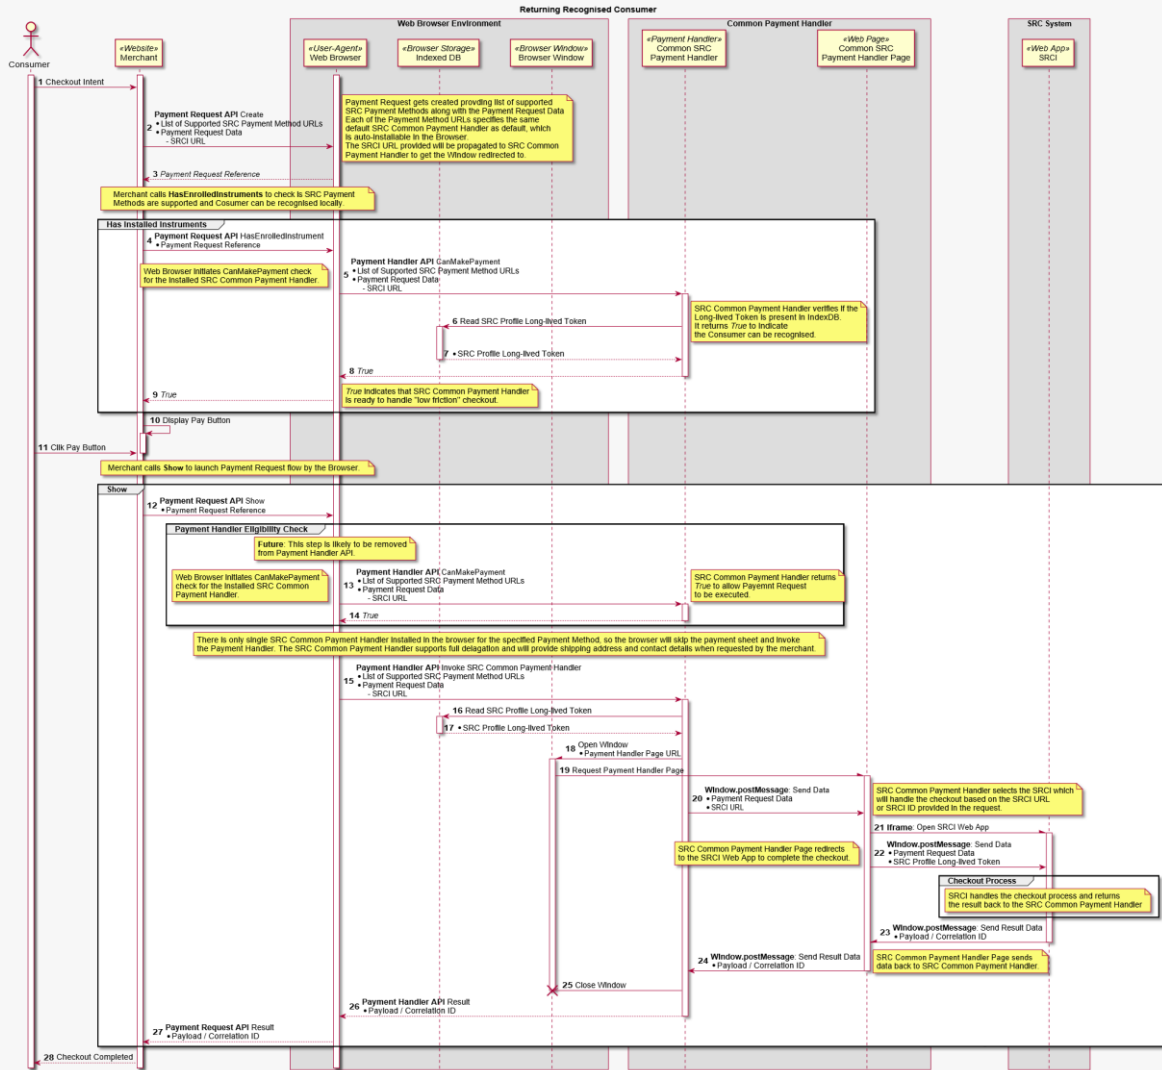

First time user, 3rd party payment handler

First time user, built-in payment handler

Returning, recognized user, 3rd party payment handler

Returning, unrecognized user, 3rd party payment handler
