---

## Abstract

This specification defines the Document Object Model Level 2 HTML, a platform- and language-neutral interface that allows programs and scripts to dynamically access and update the content and structure of [HTML 4.01] and [XHTML 1.0] documents. The Document Object Model Level 2 HTML builds on the Document Object Model Level 2 Core [DOM Level 2 Core] and is not backward compatible with DOM Level 1 HTML [DOM Level 1].

## Status of this document

*This section describes the status of this document at the time of its publication. Other documents may supersede this document. The latest status of this document series is maintained at the W3C.*

This is the 07 October 2002 W3C Candidate Recommendation of "DOM Level 2 HTML". This version updates the 5 June 2002 version based on the feedback from the implementers and the results of the DOM Level 2 HTML Test Suite.

The DOM Working Group expects to request that the Director advance this specification to Proposed Recommendation after the DOM Working Group documents two interoperable implementations of at least one normative binding. The two implementations must be produced by different organizations. The new review period ends on 16 October 2002. Please send review comments before the review period ends to [www-dom@w3.org](mailto:www-dom@w3.org) (archive).

Publication as a Candidate Recommendation does not imply endorsement by the W3C Membership. This is a draft document and may be updated, replaced or obsoleted by other documents at any time. It is inappropriate to cite this document as other than "work in progress."

Some changes from DOM Level 1 HTML are incompatible with that specification but represent more accurately the state of deployed software. Therefore, this specification renders the DOM Level 1 HTML Recommendation obsolete. W3C strongly suggests that developers and authors conform to DOM Level 2 HTML instead.

Patent disclosures relevant to this specification may be found on the Working Group's public patent disclosure page.

This document has been produced as part of the W3C DOM Activity. The authors of this document are the DOM Working Group participants.

A list of current W3C Recommendations and other technical documents can be found at <http://www.w3.org/TR>.

## Copyright Notice

**Copyright © 2002 World Wide Web Consortium, (Massachusetts Institute of Technology, Institut National de Recherche en Informatique et en Automatique, Keio University). All Rights Reserved.**

This document is published under the W3C Document Copyright Notice and License [p.5] . The bindings within this document are published under the W3C Software Copyright Notice and License [p.6] . The software license requires "Notice of any changes or modifications to the W3C files, including the date changes were made." Consequently, modified versions of the DOM bindings must document that they do not conform to the W3C standard; in the case of the IDL definitions, the pragma prefix can no longer be 'w3c.org'; in the case of the Java Language binding, the package names can no longer be in the 'org.w3c' package.

# 1. Document Object Model HTML

*Editors:*

Johnny Stenback, Netscape  
Philippe Le Hégarret, W3C  
Arnaud Le Hors, W3C and IBM (until November 2000)

## 1.1. Introduction

This section extends the DOM Level 2 Core API [DOM Level 2 Core] to describe objects and methods specific to *HTML* [p.121] documents [HTML 4.01], and XHTML documents [XHTML 1.0]. In general, the functionality needed to manipulate hierarchical document structures, elements, and attributes will be found in the core section; functionality that depends on the specific elements defined in HTML will be found in this section.

The goals of the HTML-specific DOM API are:

- to specialize and add functionality that relates specifically to HTML documents and elements.
- to address issues of backwards compatibility with the *DOM Level 0* [p.121] .
- to provide *convenience* [p.121] mechanisms, where appropriate, for common and frequent operations on HTML documents.

The key differences between the core DOM and the HTML application of DOM is that the HTML Document Object Model exposes a number of *convenience* [p.121] methods and properties that are consistent with the existing models and are more appropriate to script writers. In many cases, these enhancements are not applicable to a general DOM because they rely on the presence of a predefined DTD. The transitional or frameset DTD for HTML 4.01, or the XHTML 1.0 DTDs are assumed. Interoperability between implementations is only guaranteed for elements and attributes that are specified in the HTML 4.01 and XHTML 1.0 DTDs.

More specifically, this document includes the following specializations for HTML:

- An `HTMLDocument` [p.13] interface, derived from the core `Document` interface. `HTMLDocument` specifies the operations and queries that can be made on a HTML document.
- An `HTMLElement` [p.18] interface, derived from the core `Element` interface. `HTMLElement` specifies the operations and queries that can be made on any HTML element. Methods on `HTMLElement` include those that allow for the retrieval and modification of attributes that apply to all HTML elements.
- Specializations for all HTML elements that have attributes that extend beyond those specified in the `HTMLElement` [p.18] interface. For all such attributes, the derived interface for the element contains explicit methods for setting and getting the values.

The DOM Level 2 includes mechanisms to access and modify style specified through CSS and defines an event model that can be used with HTML documents.

The interfaces found within this section are not mandatory. A DOM application may use the `hasFeature(feature, version)` method of the `DOMImplementation` interface with parameter values "HTML" and "2.0" (respectively) to determine whether or not this module is supported by the implementation. In addition to the feature string "HTML", the feature string "XHTML" (version string "2.0") can be used to check if the implementation supports XHTML (this is equivalent to checking the features "XML" and "HTML"). In order to fully support this module, an implementation must also support the "Core" feature defined [DOM Level 2 Core]. Please refer to additional information about *conformance* in the DOM Level 2 Core specification [DOM Level 2 Core].

A DOM application can use the `hasFeature` method of the `DOMImplementation` interface to determine whether they are supported or not. The feature string for all the interfaces listed in this section is "HTML" and the version is "2.0". In order to fully support this feature, an implementation needs also to support the "Core" feature defined in the Document Object Model Level 2 Core [DOM Level 2 Core] (see also *Conformance*).

The interfaces in this specification are designed for [HTML 4.01] documents, as well as for [XHTML 1.0] documents.

## 1.2. HTML Application of Core DOM

### 1.2.1. Naming Conventions

The HTML DOM follows a naming convention for properties, methods, events, collections, and data types. All names are defined as one or more English words concatenated together to form a single string.

#### 1.2.1.1. Properties and Methods

The property or method name starts with the initial keyword in lowercase, and each subsequent word starts with a capital letter. For example, a property that returns document meta information such as the date the file was created might be named "fileDateCreated". In the ECMAScript binding, properties are exposed as properties of a given object. In Java, properties are exposed with get and set methods.

#### 1.2.1.2. Non-HTML 4.0 interfaces and attributes

While most of the interfaces defined below can be mapped directly to elements defined in the HTML 4.01 Recommendation, some of them cannot. Similarly, not all attributes listed below have counterparts in the HTML 4.01 specification (and some do, but have been renamed to avoid conflicts with scripting languages). Interfaces and attribute definitions that have links to the HTML 4.0 specification have corresponding element and attribute definitions there; all others are added by this specification, either for convenience or backwards compatibility with *DOM Level 0* [p.121] implementations.

## 1.3. XHTML and the HTML DOM

The DOM HTML Level 1 API [DOM Level 1] were originally intended to be used only for HTML 4.01 documents [HTML 4.01]. The APIs were defined well before XHTML 1.0 [XHTML 1.0] became a specification, or before it was worked on by the HTML Working Group.

From the DOM point of view, The biggest difference between HTML 4.01 (and earlier) and XHTML 1.0 is that XHTML is case sensitive, whereas HTML 4.01 is case insensitive. The HTML case insensitivity is also reflected in the DOM HTML API. For instance, element and attribute names are exposed as all uppercase (for consistency) when used on an HTML document, regardless of the character case used in the markup. Since XHTML is based on XML, in XHTML everything is case sensitive, and element and attribute names must be lowercase in the markup.

Developers need to take two things into account when writing code that works on both HTML and XHTML documents. When comparing element or attribute names to strings, the string compare needs to be case insensitive, or the element or attribute name needs to be converted into lowercase before comparing against a lowercase string. Second, when calling methods that are case insensitive when used on a HTML document (such as `getElementByTagName()` and `namedItem()`), the string that is passed in should be lowercase.

**Note:** The interfaces provided in this document are only for [HTML 4.01] and [XHTML 1.0] documents and are not guaranteed to work with any future version of XHTML.

## 1.4. Miscellaneous Object Definitions

### Interface *HTMLCollection*

An `HTMLCollection` is a list of nodes. An individual node may be accessed by either ordinal index or the node's name or `id` attributes.

**Note:** Collections in the HTML DOM are assumed to be *live* [p.121] meaning that they are automatically updated when the underlying document is changed.

#### IDL Definition

```
interface HTMLCollection {
    readonly attribute unsigned long    length;
    Node                                item(in unsigned long index);
    Node                                namedItem(in DOMString name);
};
```

#### Attributes

`length` of type `unsigned long`, `readonly`  
This attribute specifies the length or *size* of the list.

#### Methods

`item`  
This method retrieves a node specified by ordinal index. Nodes are numbered in tree order (depth-first traversal order).

#### Parameters

`index` of type `unsigned long`  
The index of the node to be fetched. The index origin is 0.

#### Return Value

**Node** The `Node` at the corresponding position upon success. A value of `null` is returned if the index is out of range.

### No Exceptions

`namedItem`

This method retrieves a `Node` using a name. With [HTML 4.01] documents, it first searches for a `Node` with a matching `id` attribute. If it doesn't find one, it then searches for a `Node` with a matching `name` attribute, but only on those elements that are allowed a `name` attribute. With [XHTML 1.0] documents, this method only searches for `Nodes` with a matching `id` attribute. This method is case insensitive in HTML documents and case sensitive in XHTML documents.

### Parameters

name of type `DOMString`

The name of the `Node` to be fetched.

### Return Value

**Node** The `Node` with a `name` or `id` attribute whose value corresponds to the specified string. Upon failure (e.g., no node with this name exists), returns `null`.

### No Exceptions

## Interface *HTMLOptionsCollection*

An `HTMLOptionsCollection` is a list of nodes representing HTML option element. An individual node may be accessed by either ordinal index or the node's `name` or `id` attributes.

**Note:** Collections in the HTML DOM are assumed to be *live* [p.121] meaning that they are automatically updated when the underlying document is changed.

### IDL Definition

```
interface HTMLOptionsCollection {
    attribute unsigned long    length;
                                // raises(DOMException) on setting

    Node                       item(in unsigned long index);
    Node                       namedItem(in DOMString name);
};
```

### Attributes

`length` of type `unsigned long`

This attribute specifies the length or *size* of the list.

### Exceptions on setting

`DOMException` `NOT_SUPPORTED_ERR`: if setting the length is not allowed by the implementation.

**Methods**`item`

This method retrieves a node specified by ordinal index. Nodes are numbered in tree order (depth-first traversal order).

**Parameters**

`index` of type `unsigned long`

The index of the node to be fetched. The index origin is 0.

**Return Value**

`Node` The `Node` at the corresponding position upon success. A value of `null` is returned if the index is out of range.

**No Exceptions**`namedItem`

This method retrieves a `Node` using a name. It first searches for a `Node` with a matching `id` attribute. If it doesn't find one, it then searches for a `Node` with a matching `name` attribute, but only on those elements that are allowed a name attribute. This method is case insensitive in HTML documents and case sensitive in XHTML documents.

**Parameters**

`name` of type `DOMString`

The name of the `Node` to be fetched.

**Return Value**

`Node` The `Node` with a name or `id` attribute whose value corresponds to the specified string. Upon failure (e.g., no node with this name exists), returns `null`.

**No Exceptions**

## 1.5. Objects related to HTML documents

**Interface *HTMLDocument***

An `HTMLDocument` is the root of the HTML hierarchy and holds the entire content. Besides providing access to the hierarchy, it also provides some *convenience* [p.121] methods for accessing certain sets of information from the document.

The following properties have been deprecated in favor of the corresponding ones for the `BODY` element:

- `alinkColor`
- `background`
- `bgColor`
- `fgColor`
- `linkColor`

- `vlinkColor`

**Note:** In DOM Level 2, the method `getElementById` is inherited from the `Document` interface where it was moved to.

### IDL Definition

```
interface HTMLDocument : Document {
    attribute DOMString          title;
    readonly attribute DOMString referrer;
    readonly attribute DOMString domain;
    readonly attribute DOMString URL;
    attribute HTMLCollection    body;
    readonly attribute HTMLCollection images;
    readonly attribute HTMLCollection applets;
    readonly attribute HTMLCollection links;
    readonly attribute HTMLCollection forms;
    readonly attribute HTMLCollection anchors;
    attribute DOMString         cookie;
                                // raises(DOMException) on setting

    void          open();
    void          close();
    void          write(in DOMString text);
    void          writeln(in DOMString text);
    NodeList      getElementByName(in DOMString elementName);
};
```

### Attributes

`URL` of type `DOMString`, `readonly`

The absolute URI [IETF RFC 2396] of the document.

`anchors` of type `HTMLCollection` [p.11], `readonly`

A collection of all the anchor (A) elements in a document with a value for the name attribute.

**Note:** For reasons of backward compatibility, the returned set of anchors only contains those anchors created with the name attribute, not those created with the `id` attribute. Note that in [XHTML 1.0], the name attribute (see section 4.10) has no semantics and is only present for legacy user agents: the `id` attribute is used instead. Users should prefer the iterator mechanisms provided by [DOM Level 2 Traversal] instead.

`applets` of type `HTMLCollection` [p.11], `readonly`

A collection of all the OBJECT elements that include applets and APPLET (*deprecated*) elements in a document.

`body` of type `HTMLElement` [p.18]

The element that contains the content for the document. In documents with BODY contents, returns the BODY element. In frameset documents, this returns the outermost FRAMESET element.

`cookie` of type `DOMString`

This mutable string attribute denotes persistent state information that (1) is associated with the current frame or document and (2) is composed of information described by the

`cookies` non-terminal of [IETF RFC 2965], Section 4.2.2.

If no persistent state information is available for the current frame or document document, then this property's value is an empty string.

When this attribute is read, all cookies are returned as a single string, with each cookie's name-value pair concatenated into a list of name-value pairs, each list item being separated by a ';' (semicolon).

When this attribute is set, the value it is set to should be a string that adheres to the `cookie` non-terminal of [IETF RFC 2965]; that is, it should be a single name-value pair followed by zero or more cookie attribute values. If no domain attribute is specified, then the domain attribute for the new value defaults to the host portion of an absolute URI [IETF RFC 2396] of the current frame or document. If no path attribute is specified, then the path attribute for the new value defaults to the absolute path portion of the URI [IETF RFC 2396] of the current frame or document. If no max-age attribute is specified, then the max-age attribute for the new value defaults to a user agent defined value. If a cookie with the specified name is already associated with the current frame or document, then the new value as well as the new attributes replace the old value and attributes. If a max-age attribute of 0 is specified for the new value, then any existing cookies of the specified name are removed from the cookie storage.

**Note:** See [IETF RFC 2965] for the semantics of persistent state item attribute value pairs.

**Note:** The precise nature of a user agent session is not defined by this specification.

### Exceptions on setting

`DOMException` `SYNTAX_ERR`: If the new value does not adhere to the cookie syntax specified by [IETF RFC 2965].

`domain` of type `DOMString`, readonly

The domain name of the server that served the document, or `null` if the server cannot be identified by a domain name.

`forms` of type `HTMLCollection` [p.11], readonly

A collection of all the forms of a document.

`images` of type `HTMLCollection` [p.11], readonly

A collection of all the `IMG` elements in a document. The behavior is limited to `IMG` elements for backwards compatibility.

**Note:** As suggested by [HTML 4.01], to include images, authors may use the `OBJECT` element or the `IMG` element. Therefore, it is recommended not to use this attribute to find the images in the document but `getElementsByTagName` with HTML 4.01 or `getElementsByTagNameNS` with XHTML 1.0.

`links` of type `HTMLCollection` [p.11], readonly

A collection of all `AREA` elements and anchor (`A`) elements in a document with a value for the `href` attribute.

referrer of type DOMString, readonly

Returns the URI [IETF RFC 2396] of the page that linked to this page. The value is an empty string if the user navigated to the page directly (not through a link, but, for example, via a bookmark).

title of type DOMString

The title of a document as specified by the TITLE element in the head of the document.

## Methods

close

Closes a document stream opened by open ( ) and forces rendering.

**No Parameters**

**No Return Value**

**No Exceptions**

getElementsByTagName

With [HTML 4.01] documents, this method returns the (possibly empty) collection of elements whose name value is given by elementName. In [XHTML 1.0] documents, this methods only return the (possibly empty) collection of form controls with matching name. This method is case sensitive.

**Parameters**

elementName of type DOMString

The name attribute value for an element.

**Return Value**

NodeList The matching elements.

**No Exceptions**

open

Open a document stream for writing. If a document exists in the target, this method clears it.

**Note:** This method and the ones following allow a user to add to or replace the structure model of a document using strings of unparsed HTML. At the time of writing alternate methods for providing similar functionality for both HTML and XML documents were being considered (see [DOM Level 3 Abstract Schemas and Load and Save]).

**No Parameters**

**No Return Value**

**No Exceptions**

write

Write a string of text to a document stream opened by open ( ). Note that the function will produce a document which is not necessarily driven by a DTD and therefore might be produce an invalid result in the context of the document.

**Parameters**

text of type DOMString

The string to be parsed into some structure in the document structure model.

**No Return Value**

**No Exceptions**

`writeln`

Write a string of text followed by a newline character to a document stream opened by `open()`. Note that the function will produce a document which is not necessarily driven by a DTD and therefore might be produce an invalid result in the context of the document

**Parameters**

text of type `DOMString`

The string to be parsed into some structure in the document structure model.

**No Return Value**

**No Exceptions**

## 1.6. HTML Elements

### 1.6.1. Property Attributes

HTML attributes are exposed as properties on the element object. The DOM naming conventions always determine the name of the exposed property, and are independent of the case of the attribute in the source document. The data type of the property is in general determined by the type of the attribute as determined by the HTML 4.01 (transitional and frameset) and XHTML 1.0 DTDs. The attributes have the semantics (including case-sensitivity) given in the [HTML 4.01] and [XHTML 1.0] specifications.

The attributes are exposed as properties for compatibility with *DOM Level 0* [p.121] . This usage is deprecated because it can not be generalized to all possible attribute names for XML. We recommend the use of generic methods on the core `Element` interface for setting, getting and removing attributes.

<b>DTD Data Type</b>	<b><i>Object Model Data Type</i></b>
CDATA	<code>DOMString</code>
Value list (e.g., (left   right   center))	<code>DOMString</code>
one-value Value list (e.g., (disabled))	<code>boolean</code>
Number	<code>long int</code>

In an HTML document the return value of an attribute that has a data type that is a value list is normalized to lowercase (independent of the case of the value in the source document).

For example, if the value of the `align` attribute on a `P` element is "Left" (which is not a valid value in XHTML due to the case sensitivity of XHTML) then the value is returned as "left". For attributes with the `CDATA` data type, the case of the return value is that given in the source document.

The return value of an attribute that is unspecified and does not have a default value is the empty string if the return type is a `DOMString`, `false` if the return type is a `boolean` and `0` if the return type is a number.

## 1.6.2. Naming Exceptions

To avoid namespace conflicts, two attributes with the same name as a keyword in one of our chosen *binding languages* [p.121] were prefixed. The `for` attribute of the `LABEL` and `SCRIPT` elements collides with loop construct naming conventions and is renamed `htmlFor`. The `class` attribute of the `HTML` elements collides with class definitions naming conventions and is renamed `className`.

## 1.6.3. Exposing Element Type Names (`tagName`, (`nodeName`))

If the document is an HTML 4.01 document the element type names exposed through a property are in uppercase. For example, the body element type name is exposed through the `tagName` property as `BODY`. If the document is an XHTML 1.0 document the element name is exposed as it is written in the XHTML file. This means that the element type names are exposed in lowercase for XHTML documents since the XHTML 1.0 DTDs defines element type names as lowercase, and XHTML, being derived from XML, is case sensitive.

## 1.6.4. The `HTMLInputElement` interface

### Interface *HTMLInputElement*

All HTML element interfaces derive from this class. Elements that only expose the HTML core attributes are represented by the base `HTMLInputElement` interface. These elements are as follows:

- special: `SUB`, `SUP`, `SPAN`, `BDO`
- font: `TT`, `I`, `B`, `U`, `S`, `STRIKE`, `BIG`, `SMALL`
- phrase: `EM`, `STRONG`, `DFN`, `CODE`, `SAMP`, `KBD`, `VAR`, `CITE`, `ACRONYM`, `ABBR`
- list: `DD`, `DT`
- `NOFRAMES`, `NOSCRIPT`
- `ADDRESS`, `CENTER`

**Note:** The `style` attribute of an HTML element is accessible through the `ElementCSSInlineStyle` interface which is defined in the CSS module [DOM Level 2 Style Sheets and CSS].

### IDL Definition

```
interface HTMLInputElement : Element {
    attribute DOMString    id;
    attribute DOMString    title;
    attribute DOMString    lang;
    attribute DOMString    dir;
    attribute DOMString    className;
};
```

### Attributes

`className` of type `DOMString`

The class attribute of the element. This attribute has been renamed due to conflicts with the "class" keyword exposed by many languages. See the class attribute definition in HTML

4.01.

`dir` of type `DOMString`

Specifies the base direction of directionally neutral text and the directionality of tables. See the `dir` attribute definition in HTML 4.01.

`id` of type `DOMString`

The element's identifier. See the `id` attribute definition in HTML 4.01.

`lang` of type `DOMString`

Language code defined in RFC 1766. See the `lang` attribute definition in HTML 4.01.

`title` of type `DOMString`

The element's advisory title. See the `title` attribute definition in HTML 4.01.

## 1.6.5. Object definitions

### Interface *HTMLHtmlElement*

Root of an HTML document. See the HTML element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLHtmlElement : HTMLElement {
    attribute DOMString    version;
};
```

#### Attributes

`version` of type `DOMString`

Version information about the document's DTD. See the `version` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

### Interface *HTMLHeadElement*

Document head information. See the HEAD element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLHeadElement : HTMLElement {
    attribute DOMString    profile;
};
```

#### Attributes

`profile` of type `DOMString`

URI [IETF RFC 2396] designating a metadata profile. See the `profile` attribute definition in HTML 4.01.

### Interface *HTMMLinkElement*

The LINK element specifies a link to an external resource, and defines this document's relationship to that resource (or vice versa). See the LINK element definition in HTML 4.01 (see also the `LinkStyle` interface in the `StyleSheet` module [DOM Level 2 Style Sheets and CSS]).

#### IDL Definition

```
interface HTMLLinkElement : HTMLElement {
    attribute boolean        disabled;
    attribute DOMString      charset;
    attribute DOMString      href;
    attribute DOMString      hreflang;
    attribute DOMString      media;
    attribute DOMString      rel;
    attribute DOMString      rev;
    attribute DOMString      target;
    attribute DOMString      type;
};
```

**Attributes**

charset of type DOMString

The character encoding of the resource being linked to. See the charset attribute definition in HTML 4.01.

disabled of type boolean

Enables/disables the link. This is currently only used for style sheet links, and may be used to activate or deactivate style sheets.

href of type DOMString

The URI [IETF RFC 2396] of the linked resource. See the href attribute definition in HTML 4.01.

hreflang of type DOMString

Language code of the linked resource. See the hreflang attribute definition in HTML 4.01.

media of type DOMString

Designed for use with one or more target media. See the media attribute definition in HTML 4.01.

rel of type DOMString

Forward link type. See the rel attribute definition in HTML 4.01.

rev of type DOMString

Reverse link type. See the rev attribute definition in HTML 4.01.

target of type DOMString

Frame to render the resource in. See the target attribute definition in HTML 4.01.

type of type DOMString

Advisory content type. See the type attribute definition in HTML 4.01.

**Interface *HTMLTitleElement***

The document title. See the TITLE element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLTitleElement : HTMLElement {
    attribute DOMString      text;
};
```

**Attributes**

text of type DOMString

The specified title as a string.

**Interface *HTMLMetaElement***

This contains generic meta-information about the document. See the META element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLMetaElement : HTMLElement {
    attribute DOMString    content;
    attribute DOMString    httpEquiv;
    attribute DOMString    name;
    attribute DOMString    scheme;
};
```

**Attributes**

content of type DOMString

Associated information. See the content attribute definition in HTML 4.01.

httpEquiv of type DOMString

HTTP response header name [IETF RFC 2616]. See the http-equiv attribute definition in HTML 4.01.

name of type DOMString

Meta information name. See the name attribute definition in HTML 4.01.

scheme of type DOMString

Select form of content. See the scheme attribute definition in HTML 4.01.

**Interface *HTMLBaseElement***

Document base URI [IETF RFC 2396]. See the BASE element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLBaseElement : HTMLElement {
    attribute DOMString    href;
    attribute DOMString    target;
};
```

**Attributes**

href of type DOMString

The base URI [IETF RFC 2396]. See the href attribute definition in HTML 4.01.

target of type DOMString

The default target frame. See the target attribute definition in HTML 4.01.

**Interface *HTMLIsIndexElement***

This element is used for single-line text input. See the ISINDEX element definition in HTML 4.01. This element is deprecated in HTML 4.01.

**IDL Definition**

```
interface HTMLIsIndexElement : HTMLElement {
    readonly attribute HTMLFormElement form;
    attribute DOMString    prompt;
};
```

**Attributes**

form of type `HTMLFormElement` [p.23] , readonly

Returns the FORM element containing this control. Returns `null` if this control is not within the context of a form.

prompt of type `DOMString`

The prompt message. See the prompt attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

**Interface *HTMLStyleElement***

Style information. See the `STYLE` element definition in HTML 4.01, the CSS module [DOM Level 2 Style Sheets and CSS] and the `LinkStyle` interface in the StyleSheets module [DOM Level 2 Style Sheets and CSS].

**IDL Definition**

```
interface HTMLStyleElement : HTMLElement {
    attribute boolean        disabled;
    attribute DOMString      media;
    attribute DOMString      type;
};
```

**Attributes**

disabled of type `boolean`

Enables/disables the style sheet.

media of type `DOMString`

Designed for use with one or more target media. See the media attribute definition in HTML 4.01.

type of type `DOMString`

The content type of the style sheet language. See the type attribute definition in HTML 4.01.

**Interface *HTMLBodyElement***

The HTML document body. This element is always present in the DOM API, even if the tags are not present in the source document. See the `BODY` element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLBodyElement : HTMLElement {
    attribute DOMString      aLink;
    attribute DOMString      background;
    attribute DOMString      bgColor;
    attribute DOMString      link;
    attribute DOMString      text;
    attribute DOMString      vLink;
};
```

**Attributes**

aLink of type `DOMString`

Color of active links (after mouse-button down, but before mouse-button up). See the `alink` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

background of type DOMString

URI [IETF RFC 2396] of the background texture tile image. See the background attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

bgColor of type DOMString

Document background color. See the bgColor attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

link of type DOMString

Color of links that are not active and unvisited. See the link attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

text of type DOMString

Document text color. See the text attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

vLink of type DOMString

Color of links that have been visited by the user. See the vlink attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

### **Interface *HTMLFormElement***

The FORM element encompasses behavior similar to a collection and an element. It provides direct access to the contained form controls as well as the attributes of the form element. See the FORM element definition in HTML 4.01.

### **IDL Definition**

```
interface HTMLFormElement : HTMLElement {
  readonly attribute HTMLCollection elements;
  readonly attribute long length;
  attribute DOMString name;
  attribute DOMString acceptCharset;
  attribute DOMString action;
  attribute DOMString enctype;
  attribute DOMString method;
  attribute DOMString target;
  void submit();
  void reset();
};
```

### **Attributes**

acceptCharset of type DOMString

List of character sets supported by the server. See the accept-charset attribute definition in HTML 4.01.

action of type DOMString

Server-side form handler. See the action attribute definition in HTML 4.01.

elements of type HTMLCollection [p.11], readonly

Returns a collection of all form control elements in the form.

enctype of type DOMString

The content type of the submitted form, generally "application/x-www-form-urlencoded". See the enctype attribute definition in HTML 4.01.

**Note:** The onsubmit even handler is not guaranteed to be triggered when invoking this method. The behavior is inconsistent for historical reasons and authors should not rely on a particular one.

length of type long, readonly

The number of form controls in the form.

method of type DOMString

HTTP method [IETF RFC 2616] used to submit form. See the method attribute definition in HTML 4.01.

name of type DOMString

Names the form.

target of type DOMString

Frame to render the resource in. See the target attribute definition in HTML 4.01.

### Methods

reset

Restores a form element's default values. It performs the same action as a reset button.

**No Parameters**

**No Return Value**

**No Exceptions**

submit

Submits the form. It performs the same action as a submit button.

**No Parameters**

**No Return Value**

**No Exceptions**

### Interface *HTMLSelectElement*

The select element allows the selection of an option. The contained options can be directly accessed through the select element as a collection. See the SELECT element definition in HTML 4.01.

### IDL Definition

```
interface HTMLSelectElement : HTMLElement {
  readonly attribute DOMString      type;
  attribute long                    selectedIndex;
  attribute DOMString               value;
  attribute unsigned long           length;
                                     // raises(DOMException) on setting

  readonly attribute HTMLFormElement form;
  readonly attribute HTMLOptionsCollection options;
  attribute boolean                 disabled;
  attribute boolean                 multiple;
  attribute DOMString               name;
  attribute long                    size;
  attribute long                    tabIndex;

  void                               add(in HTMLElement element,
                                     in HTMLElement before)
                                     raises(DOMException);
}
```

```

void          remove(in long index);
void          blur();
void          focus();
};

```

**Attributes**

`disabled` of type `boolean`

The control is unavailable in this context. See the `disabled` attribute definition in HTML 4.01.

`form` of type `HTMLFormElement` [p.23] , `readonly`

Returns the `FORM` element containing this control. Returns `null` if this control is not within the context of a form.

`length` of type `unsigned long`

The number of options in this `SELECT`.

**Exceptions on setting**

`DOMException` `NOT_SUPPORTED_ERR`: if setting the `length` is not allowed by the implementation.

`multiple` of type `boolean`

If `true`, multiple `OPTION` elements may be selected in this `SELECT`. See the `multiple` attribute definition in HTML 4.01.

`name` of type `DOMString`

Form control or object name when submitted with a form. See the `name` attribute definition in HTML 4.01.

`options` of type `HTMLOptionsCollection` [p.12] , `readonly`

The collection of `OPTION` elements contained by this element.

`selectedIndex` of type `long`

The ordinal index of the selected option, starting from 0. The value -1 is returned if no element is selected. If multiple options are selected, the index of the first selected option is returned.

`size` of type `long`

Number of visible rows. See the `size` attribute definition in HTML 4.01.

`tabIndex` of type `long`

Index that represents the element's position in the tabbing order. See the `tabindex` attribute definition in HTML 4.01.

`type` of type `DOMString`, `readonly`

The type of this form control. This is the string "select-multiple" when the `multiple` attribute is `true` and the string "select-one" when `false`.

`value` of type `DOMString`

The current form control value (i.e. the value of the currently selected option), if multiple options are selected this is the value of the first selected option.

**Methods**

`add`

Add a new element to the collection of `OPTION` elements for this `SELECT`. This method is the equivalent of the `appendChild` method of the `Node` interface if the `before` parameter is `null`. It is equivalent to the `insertBefore` method on the parent of

before in all other cases. This method may have no effect if the new element is not an OPTION or an OPTGROUP.

**Parameters**

element of type HTMLInputElement [p.18]

The element to add.

before of type HTMLInputElement

The element to insert before, or null for the tail of the list.

**Exceptions**

DOMException NOT\_FOUND\_ERR: Raised if before is not a descendant of the SELECT element.

**No Return Value**

blur

Removes keyboard focus from this element.

**No Parameters**

**No Return Value**

**No Exceptions**

focus

Gives keyboard focus to this element.

**No Parameters**

**No Return Value**

**No Exceptions**

remove

Remove an element from the collection of OPTION elements for this SELECT. Does nothing if no element has the given index.

**Parameters**

index of type long

The index of the item to remove, starting from 0.

**No Return Value**

**No Exceptions**

**Interface *HTMLOptGroupElement***

Group options together in logical subdivisions. See the OPTGROUP element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLOptGroupElement : HTMLInputElement {
    attribute boolean        disabled;
    attribute DOMString      label;
};
```

**Attributes**

disabled of type boolean

The control is unavailable in this context. See the disabled attribute definition in HTML 4.01.

label of type DOMString

Assigns a label to this option group. See the label attribute definition in HTML 4.01.

### Interface *HTMLOptionElement*

A selectable choice. See the OPTION element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLOptionElement : HTMLFormElement {
  readonly attribute HTMLFormElement form;
  attribute boolean defaultSelected;
  readonly attribute DOMString text;
  readonly attribute long index;
  attribute boolean disabled;
  attribute DOMString label;
  attribute boolean selected;
  attribute DOMString value;
};
```

#### Attributes

defaultSelected of type boolean

Represents the value of the HTML selected attribute. The value of this attribute does not change if the state of the corresponding form control, in an interactive user agent, changes. See the selected attribute definition in HTML 4.01.

disabled of type boolean

The control is unavailable in this context. See the disabled attribute definition in HTML 4.01.

form of type HTMLFormElement [p.23] , readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

index of type long, readonly

The index of this OPTION in its parent SELECT, starting from 0.

label of type DOMString

Option label for use in hierarchical menus. See the label attribute definition in HTML 4.01.

selected of type boolean

Represents the current state of the corresponding form control, in an interactive user agent. Changing this attribute changes the state of the form control, but does not change the value of the HTML selected attribute of the element.

text of type DOMString, readonly

The text contained within the option element.

value of type DOMString

The current form control value. See the value attribute definition in HTML 4.01.

### Interface *HTMLInputElement*

Form control.

**Note:** Depending upon the environment in which the page is being viewed, the value property may be read-only for the file upload input type. For the "password" input type, the actual value returned may be masked to prevent unauthorized use. See the INPUT element definition in [HTML 4.01].

**IDL Definition**

```

interface HTMLInputElement : HTMLElement {
    attribute DOMString      defaultValue;
    attribute boolean        defaultChecked;
    readonly attribute HTMLFormElement form;
    attribute DOMString      accept;
    attribute DOMString      accessKey;
    attribute DOMString      align;
    attribute DOMString      alt;
    attribute boolean        checked;
    attribute boolean        disabled;
    attribute long           maxLength;
    attribute DOMString      name;
    attribute boolean        readOnly;
    attribute unsigned long  size;
    attribute DOMString      src;
    attribute long           tabIndex;

    // Modified in DOM Level 2:
    attribute DOMString      type;
    attribute DOMString      useMap;
    attribute DOMString      value;

    void blur();
    void focus();
    void select();
    void click();
};

```

**Attributes**

**accept** of type `DOMString`

A comma-separated list of content types that a server processing this form will handle correctly. See the `accept` attribute definition in HTML 4.01.

**accessKey** of type `DOMString`

A single character access key to give access to the form control. See the `accesskey` attribute definition in HTML 4.01.

**align** of type `DOMString`

Aligns this object (vertically or horizontally) with respect to its surrounding text. See the `align` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

**alt** of type `DOMString`

Alternate text for user agents not rendering the normal content of this element. See the `alt` attribute definition in HTML 4.01.

**checked** of type `boolean`

When the `type` attribute of the element has the value "radio" or "checkbox", this represents the current state of the form control, in an interactive user agent. Changes to this attribute change the state of the form control, but do not change the value of the HTML `checked` attribute of the `INPUT` element.

**defaultChecked** of type `boolean`

When `type` has the value "radio" or "checkbox", this represents the HTML `checked` attribute of the element. The value of this attribute does not change if the state of the corresponding form control, in an interactive user agent, changes. See the `checked` attribute definition in HTML 4.01.

`defaultValue` of type `DOMString`

When the `type` attribute of the element has the value "text", "file" or "password", this represents the HTML value attribute of the element. The value of this attribute does not change if the contents of the corresponding form control, in an interactive user agent, changes. See the value attribute definition in HTML 4.01.

`disabled` of type `boolean`

The control is unavailable in this context. See the disabled attribute definition in HTML 4.01.

`form` of type `HTMLFormElement` [p.23] , `readonly`

Returns the FORM element containing this control. Returns `null` if this control is not within the context of a form.

`maxLength` of type `long`

Maximum number of characters for text fields, when `type` has the value "text" or "password". See the `maxlength` attribute definition in HTML 4.01.

`name` of type `DOMString`

Form control or object name when submitted with a form. See the name attribute definition in HTML 4.01.

`readOnly` of type `boolean`

This control is read-only. Relevant only when `type` has the value "text" or "password". See the `readonly` attribute definition in HTML 4.01.

`size` of type `unsigned long`

Size information. The precise meaning is specific to each type of field. See the size attribute definition in HTML 4.01.

`src` of type `DOMString`

When the `type` attribute has the value "image", this attribute specifies the location of the image to be used to decorate the graphical submit button. See the `src` attribute definition in HTML 4.01.

`tabIndex` of type `long`

Index that represents the element's position in the tabbing order. See the `tabindex` attribute definition in HTML 4.01.

`type` of type `DOMString`, modified in **DOM Level 2**

The type of control created (all lower case). See the `type` attribute definition in HTML 4.01.

`useMap` of type `DOMString`

Use client-side image map. See the `usemap` attribute definition in HTML 4.01.

`value` of type `DOMString`

When the `type` attribute of the element has the value "text", "file" or "password", this represents the current contents of the corresponding form control, in an interactive user agent. Changing this attribute changes the contents of the form control, but does not change the value of the HTML value attribute of the element. When the `type` attribute of the element has the value "button", "hidden", "submit", "reset", "image", "checkbox" or "radio", this represents the HTML value attribute of the element. See the value attribute definition in HTML 4.01.

## Methods

`blur`

Removes keyboard focus from this element.

**No Parameters**

**No Return Value****No Exceptions**

click

Simulate a mouse-click. For INPUT elements whose type attribute has one of the following values: "button", "checkbox", "radio", "reset", or "submit".

**No Parameters****No Return Value****No Exceptions**

focus

Gives keyboard focus to this element.

**No Parameters****No Return Value****No Exceptions**

select

Select the contents of the text area. For INPUT elements whose type attribute has one of the following values: "text", "file", or "password".

**No Parameters****No Return Value****No Exceptions****Interface *HTMLTextAreaElement***

Multi-line text field. See the TEXTAREA element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLTextAreaElement : HTMLElement {
    attribute DOMString      defaultValue;
    readonly attribute HTMLFormElement form;
    attribute DOMString      accessKey;
    attribute long           cols;
    attribute boolean        disabled;
    attribute DOMString      name;
    attribute boolean        readOnly;
    attribute long           rows;
    attribute long           tabIndex;
    readonly attribute DOMString type;
    attribute DOMString      value;
    void                     blur();
    void                     focus();
    void                     select();
};
```

**Attributes**

accessKey of type DOMString

A single character access key to give access to the form control. See the accesskey attribute definition in HTML 4.01.

cols of type long

Width of control (in characters). See the cols attribute definition in HTML 4.01.

`defaultValue` of type `DOMString`

Represents the contents of the element. The value of this attribute does not change if the contents of the corresponding form control, in an interactive user agent, changes.

`disabled` of type `boolean`

The control is unavailable in this context. See the `disabled` attribute definition in HTML 4.01.

`form` of type `HTMLFormElement` [p.23], `readonly`

Returns the `FORM` element containing this control. Returns `null` if this control is not within the context of a form.

`name` of type `DOMString`

Form control or object name when submitted with a form. See the `name` attribute definition in HTML 4.01.

`readOnly` of type `boolean`

This control is read-only. See the `readOnly` attribute definition in HTML 4.01.

`rows` of type `long`

Number of text rows. See the `rows` attribute definition in HTML 4.01.

`tabIndex` of type `long`

Index that represents the element's position in the tabbing order. See the `tabindex` attribute definition in HTML 4.01.

`type` of type `DOMString`, `readonly`

The type of this form control. This the string "textarea".

`value` of type `DOMString`

Represents the current contents of the corresponding form control, in an interactive user agent. Changing this attribute changes the contents of the form control, but does not change the contents of the element. If the entirety of the data can not fit into a single `DOMString`, the implementation may truncate the data.

## Methods

`blur`

Removes keyboard focus from this element.

**No Parameters**

**No Return Value**

**No Exceptions**

`focus`

Gives keyboard focus to this element.

**No Parameters**

**No Return Value**

**No Exceptions**

`select`

Select the contents of the `TEXTAREA`.

**No Parameters**

**No Return Value**

**No Exceptions**

**Interface** *HTMLButtonElement*

Push button. See the `BUTTON` element definition in HTML 4.01.

### IDL Definition

```
interface HTMLButtonElement : HTMLElement {
  readonly attribute HTMLFormElement form;
  attribute DOMString      accessKey;
  attribute boolean        disabled;
  attribute DOMString      name;
  attribute long           tabIndex;
  readonly attribute DOMString type;
  attribute DOMString      value;
};
```

### Attributes

`accessKey` of type `DOMString`

A single character access key to give access to the form control. See the `accesskey` attribute definition in HTML 4.01.

`disabled` of type `boolean`

The control is unavailable in this context. See the `disabled` attribute definition in HTML 4.01.

`form` of type `HTMLFormElement` [p.23], `readonly`

Returns the `FORM` element containing this control. Returns `null` if this control is not within the context of a form.

`name` of type `DOMString`

Form control or object name when submitted with a form. See the `name` attribute definition in HTML 4.01.

`tabIndex` of type `long`

Index that represents the element's position in the tabbing order. See the `tabindex` attribute definition in HTML 4.01.

`type` of type `DOMString`, `readonly`

The type of button (all lower case). See the `type` attribute definition in HTML 4.01.

`value` of type `DOMString`

The current form control value. See the `value` attribute definition in HTML 4.01.

### Interface *HTMLLabelElement*

Form field label text. See the `LABEL` element definition in HTML 4.01.

### IDL Definition

```
interface HTMLLabelElement : HTMLElement {
  readonly attribute HTMLFormElement form;
  attribute DOMString      accessKey;
  attribute DOMString      htmlFor;
};
```

### Attributes

`accessKey` of type `DOMString`

A single character access key to give access to the form control. See the `accesskey` attribute definition in HTML 4.01.

form of type `HTMLFormElement` [p.23] , readonly

Returns the FORM element containing this control. Returns `null` if this control is not within the context of a form.

htmlFor of type `DOMString`

This attribute links this label with another form control by `id` attribute. See the for attribute definition in HTML 4.01.

### Interface *HTMLFieldSetElement*

Organizes form controls into logical groups. See the `FIELDSET` element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLFieldSetElement : HTMLElement {
    readonly attribute HTMLFormElement form;
};
```

#### Attributes

form of type `HTMLFormElement` [p.23] , readonly

Returns the FORM element containing this control. Returns `null` if this control is not within the context of a form.

### Interface *HTMLLegendElement*

Provides a caption for a `FIELDSET` grouping. See the `LEGEND` element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLLegendElement : HTMLElement {
    readonly attribute HTMLFormElement form;
    attribute DOMString      accessKey;
    attribute DOMString      align;
};
```

#### Attributes

accessKey of type `DOMString`

A single character access key to give access to the form control. See the `accesskey` attribute definition in HTML 4.01.

align of type `DOMString`

Text alignment relative to `FIELDSET`. See the `align` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

form of type `HTMLFormElement` [p.23] , readonly

Returns the FORM element containing this control. Returns `null` if this control is not within the context of a form.

### Interface *HTMLUListElement*

Unordered list. See the `UL` element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLULListElement : HTMLElement {
    attribute boolean        compact;
    attribute DOMString      type;
};
```

**Attributes**

compact of type boolean

Reduce spacing between list items. See the compact attribute definition in HTML 4.01.  
This attribute is deprecated in HTML 4.01.

type of type DOMString

Bullet style. See the type attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

**Interface *HTMLLOListElement***

Ordered list. See the OL element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLLOListElement : HTMLElement {
    attribute boolean        compact;
    attribute long           start;
    attribute DOMString      type;
};
```

**Attributes**

compact of type boolean

Reduce spacing between list items. See the compact attribute definition in HTML 4.01.  
This attribute is deprecated in HTML 4.01.

start of type long

Starting sequence number. See the start attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

type of type DOMString

Numbering style. See the type attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

**Interface *HTMLDLListElement***

Definition list. See the DL element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLDLListElement : HTMLElement {
    attribute boolean        compact;
};
```

**Attributes**

compact of type boolean

Reduce spacing between list items. See the compact attribute definition in HTML 4.01.  
This attribute is deprecated in HTML 4.01.

**Interface *HTMLDirectoryElement***

Directory list. See the DIR element definition in HTML 4.01. This element is deprecated in HTML 4.01.

### IDL Definition

```
interface HTMLDirectoryElement : HTMLElement {
    attribute boolean    compact;
};
```

### Attributes

compact of type boolean

Reduce spacing between list items. See the compact attribute definition in HTML 4.01.

This attribute is deprecated in HTML 4.01.

### Interface *HTMLMenuElement*

Menu list. See the MENU element definition in HTML 4.01. This element is deprecated in HTML 4.01.

### IDL Definition

```
interface HTMLMenuElement : HTMLElement {
    attribute boolean    compact;
};
```

### Attributes

compact of type boolean

Reduce spacing between list items. See the compact attribute definition in HTML 4.01.

This attribute is deprecated in HTML 4.01.

### Interface *HTMLLIElement*

List item. See the LI element definition in HTML 4.01.

### IDL Definition

```
interface HTMLLIElement : HTMLElement {
    attribute DOMString  type;
    attribute long       value;
};
```

### Attributes

type of type DOMString

List item bullet style. See the type attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

value of type long

Reset sequence number when used in OL. See the value attribute definition in HTML 4.01.

This attribute is deprecated in HTML 4.01.

### Interface *HTMLDivElement*

Generic block container. See the DIV element definition in HTML 4.01.

### IDL Definition

```
interface HTMLDivElement : HTMLElement {
    attribute DOMString    align;
};
```

### Attributes

`align` of type `DOMString`  
Horizontal text alignment. See the `align` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

### Interface *HTMLParagraphElement*

Paragraphs. See the P element definition in HTML 4.01.

### IDL Definition

```
interface HTMLParagraphElement : HTMLElement {
    attribute DOMString    align;
};
```

### Attributes

`align` of type `DOMString`  
Horizontal text alignment. See the `align` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

### Interface *HTMLHeadingElement*

For the H1 to H6 elements. See the H1 element definition in HTML 4.01.

### IDL Definition

```
interface HTMLHeadingElement : HTMLElement {
    attribute DOMString    align;
};
```

### Attributes

`align` of type `DOMString`  
Horizontal text alignment. See the `align` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

### Interface *HTMLQuoteElement*

For the Q and BLOCKQUOTE elements. See the Q element definition in HTML 4.01.

### IDL Definition

```
interface HTMLQuoteElement : HTMLElement {
    attribute DOMString    cite;
};
```

**Attributes**

cite of type DOMString

A URI [IETF RFC 2396] designating a source document or message. See the cite attribute definition in HTML 4.01.

**Interface *HTMLPreElement***

Preformatted text. See the PRE element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLPreElement : HTMLElement {
    attribute long          width;
};
```

**Attributes**

width of type long

Fixed width for content. See the width attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

**Interface *HTMLBRElement***

Force a line break. See the BR element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLBRElement : HTMLElement {
    attribute DOMString  clear;
};
```

**Attributes**

clear of type DOMString

Control flow of text around floats. See the clear attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

**Interface *HTMLBaseFontElement***

Base font. See the BASEFONT element definition in HTML 4.01. This element is deprecated in HTML 4.01.

**IDL Definition**

```
interface HTMLBaseFontElement : HTMLElement {
    attribute DOMString  color;
    attribute DOMString  face;
    attribute long       size;
};
```

**Attributes**

color of type DOMString

Font color. See the color attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

face of type DOMString

Font face identifier. See the face attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

size of type long

Computed font size. See the size attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

### Interface *HTMLFontElement*

Local change to font. See the FONT element definition in HTML 4.01. This element is deprecated in HTML 4.01.

#### IDL Definition

```
interface HTMLFontElement : HTMLElement {
    attribute DOMString    color;
    attribute DOMString    face;
    attribute DOMString    size;
};
```

#### Attributes

color of type DOMString

Font color. See the color attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

face of type DOMString

Font face identifier. See the face attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

size of type DOMString

Font size. See the size attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

### Interface *HTMLHRElement*

Create a horizontal rule. See the HR element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLHRElement : HTMLElement {
    attribute DOMString    align;
    attribute boolean      noShade;
    attribute DOMString    size;
    attribute DOMString    width;
};
```

#### Attributes

align of type DOMString

Align the rule on the page. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

noShade of type boolean

Indicates to the user agent that there should be no shading in the rendering of this element. See the noshade attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

size of type DOMString

The height of the rule. See the size attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

width of type DOMString

The width of the rule. See the width attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

### Interface *HTMLModElement*

Notice of modification to part of a document. See the INS and DEL element definitions in HTML 4.01.

#### IDL Definition

```
interface HTMLModElement : HTMLElement {
    attribute DOMString    cite;
    attribute DOMString    dateTime;
};
```

#### Attributes

cite of type DOMString

A URI [IETF RFC 2396] designating a document that describes the reason for the change. See the cite attribute definition in HTML 4.01.

dateTime of type DOMString

The date and time of the change. See the datetime attribute definition in HTML 4.01.

### Interface *HTMLAnchorElement*

The anchor element. See the A element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLAnchorElement : HTMLElement {
    attribute DOMString    accessKey;
    attribute DOMString    charset;
    attribute DOMString    coords;
    attribute DOMString    href;
    attribute DOMString    hreflang;
    attribute DOMString    name;
    attribute DOMString    rel;
    attribute DOMString    rev;
    attribute DOMString    shape;
    attribute long         tabIndex;
    attribute DOMString    target;
    attribute DOMString    type;
    void                  blur();
    void                  focus();
};
```

#### Attributes

accessKey of type DOMString

A single character access key to give access to the form control. See the accesskey attribute definition in HTML 4.01.

`charset` of type `DOMString`

The character encoding of the linked resource. See the `charset` attribute definition in HTML 4.01.

`coords` of type `DOMString`

Comma-separated list of lengths, defining an active region geometry. See also `shape` for the shape of the region. See the `coords` attribute definition in HTML 4.01.

`href` of type `DOMString`

The absolute URI [IETF RFC 2396] of the linked resource. See the `href` attribute definition in HTML 4.01.

`hreflang` of type `DOMString`

Language code of the linked resource. See the `hreflang` attribute definition in HTML 4.01.

`name` of type `DOMString`

Anchor name. See the `name` attribute definition in HTML 4.01.

`rel` of type `DOMString`

Forward link type. See the `rel` attribute definition in HTML 4.01.

`rev` of type `DOMString`

Reverse link type. See the `rev` attribute definition in HTML 4.01.

`shape` of type `DOMString`

The shape of the active area. The coordinates are given by `coords`. See the `shape` attribute definition in HTML 4.01.

`tabIndex` of type `long`

Index that represents the element's position in the tabbing order. See the `tabindex` attribute definition in HTML 4.01.

`target` of type `DOMString`

Frame to render the resource in. See the `target` attribute definition in HTML 4.01.

`type` of type `DOMString`

Advisory content type. See the `type` attribute definition in HTML 4.01.

### Methods

`blur`

Removes keyboard focus from this element.

**No Parameters**

**No Return Value**

**No Exceptions**

`focus`

Gives keyboard focus to this element.

**No Parameters**

**No Return Value**

**No Exceptions**

### Interface *HTMLImageElement*

Embedded image. See the `IMG` element definition in HTML 4.01.

### IDL Definition

```
interface HTMLImageElement : HTMLElement {
    attribute DOMString    name;
    attribute DOMString    align;
    attribute DOMString    alt;
```

```

        attribute DOMString    border;
        attribute long         height;
        attribute long         hspace;
        attribute boolean      isMap;
        attribute DOMString    longDesc;
        attribute DOMString    src;
        attribute DOMString    useMap;
        attribute long         vspace;
        attribute long         width;
};

```

### Attributes

`align` of type `DOMString`

Aligns this object (vertically or horizontally) with respect to its surrounding text. See the `align` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`alt` of type `DOMString`

Alternate text for user agents not rendering the normal content of this element. See the `alt` attribute definition in HTML 4.01.

`border` of type `DOMString`

Width of border around image. See the `border` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01. Note that the type of this attribute was `DOMString` in DOM Level 1 HTML [DOM Level 1].

`height` of type `long`

Height of the image in pixels. See the `height` attribute definition in HTML 4.01. Note that the type of this attribute was `DOMString` in DOM Level 1 HTML [DOM Level 1].

`hspace` of type `long`

Horizontal space to the left and right of this image in pixels. See the `hspace` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01. Note that the type of this attribute was `DOMString` in DOM Level 1 HTML [DOM Level 1].

`isMap` of type `boolean`

Use server-side image map. See the `ismap` attribute definition in HTML 4.01.

`longDesc` of type `DOMString`

URI [IETF RFC 2396] designating a long description of this image or frame. See the `longdesc` attribute definition in HTML 4.01.

`name` of type `DOMString`

The name of the element (for backwards compatibility).

`src` of type `DOMString`

URI [IETF RFC 2396] designating the source of this image. See the `src` attribute definition in HTML 4.01.

`useMap` of type `DOMString`

Use client-side image map. See the `usemap` attribute definition in HTML 4.01.

`vspace` of type `long`

Vertical space above and below this image in pixels. See the `vspace` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01. Note that the type of this attribute was "`DOMString`" in DOM Level 1 HTML [DOM Level 1].

`width` of type `long`

The width of the image in pixels. See the `width` attribute definition in HTML 4.01. Note that the type of this attribute was `DOMString` in DOM Level 1 HTML [DOM Level 1].

**Interface *HTMLObjectElement***

Generic embedded object.

**Note:** In principle, all properties on the object element are read-write but in some environments some properties may be read-only once the underlying object is instantiated. See the OBJECT element definition in [HTML 4.01].

**IDL Definition**

```
interface HTMLObjectElement : HTMLInputElement {
  readonly attribute HTMLFormElement form;
  attribute DOMString code;
  attribute DOMString align;
  attribute DOMString archive;
  attribute DOMString border;
  attribute DOMString codeBase;
  attribute DOMString codeType;
  attribute DOMString data;
  attribute boolean declare;
  attribute DOMString height;
  attribute long hspace;
  attribute DOMString name;
  attribute DOMString standby;
  attribute long tabIndex;
  attribute DOMString type;
  attribute DOMString useMap;
  attribute long vspace;
  attribute DOMString width;
  // Introduced in DOM Level 2:
  readonly attribute Document contentDocument;
};
```

**Attributes**

`align` of type `DOMString`

Aligns this object (vertically or horizontally) with respect to its surrounding text. See the `align` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`archive` of type `DOMString`

Space-separated list of archives. See the `archive` attribute definition in HTML 4.01.

`border` of type `DOMString`

Width of border around the object. See the `border` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`code` of type `DOMString`

Applet class file. See the `code` attribute for `HTMLAppletElement`.

`codeBase` of type `DOMString`

Base URI [IETF RFC 2396] for `classid`, `data`, and `archive` attributes. See the `codebase` attribute definition in HTML 4.01.

`codeType` of type `DOMString`

Content type for data downloaded via `classid` attribute. See the `codetype` attribute definition in HTML 4.01.

`contentDocument` of type `Document`, readonly, introduced in **DOM Level 2**

The document this object contains, if there is any and it is available, or `null` otherwise.

`data` of type `DOMString`

A URI [IETF RFC 2396] specifying the location of the object's data. See the `data` attribute definition in HTML 4.01.

`declare` of type `boolean`

Declare (for future reference), but do not instantiate, this object. See the `declare` attribute definition in HTML 4.01.

`form` of type `HTMLFormElement` [p.23] , readonly

Returns the FORM element containing this control. Returns `null` if this control is not within the context of a form.

`height` of type `DOMString`

Override height. See the `height` attribute definition in HTML 4.01.

`hspace` of type `long`

Horizontal space, in pixels, to the left and right of this image, applet, or object. See the `hspace` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`name` of type `DOMString`

Form control or object name when submitted with a form. See the `name` attribute definition in HTML 4.01.

`standby` of type `DOMString`

Message to render while loading the object. See the `standby` attribute definition in HTML 4.01.

`tabIndex` of type `long`

Index that represents the element's position in the tabbing order. See the `tabindex` attribute definition in HTML 4.01.

`type` of type `DOMString`

Content type for data downloaded via `data` attribute. See the `type` attribute definition in HTML 4.01.

`useMap` of type `DOMString`

Use client-side image map. See the `usemap` attribute definition in HTML 4.01.

`vspace` of type `long`

Vertical space, in pixels, above and below this image, applet, or object. See the `vspace` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`width` of type `DOMString`

Override width. See the `width` attribute definition in HTML 4.01.

### **Interface *HTMLParamElement***

Parameters fed to the OBJECT element. See the PARAM element definition in HTML 4.01.

#### **IDL Definition**

```
interface HTMLParamElement : HTMLElement {
    attribute DOMString    name;
    attribute DOMString    type;
    attribute DOMString    value;
    attribute DOMString    valueType;
};
```

**Attributes**

name of type DOMString

The name of a run-time parameter. See the name attribute definition in HTML 4.01.

type of type DOMString

Content type for the value attribute when valueType has the value "ref". See the type attribute definition in HTML 4.01.

value of type DOMString

The value of a run-time parameter. See the value attribute definition in HTML 4.01.

valueType of type DOMString

Information about the meaning of the value attribute value. See the valueType attribute definition in HTML 4.01.

**Interface *HTMLAppletElement***

An embedded Java applet. See the APPLET element definition in HTML 4.01. This element is deprecated in HTML 4.01.

**IDL Definition**

```
interface HTMLAppletElement : HTMLElement {
    attribute DOMString    align;
    attribute DOMString    alt;
    attribute DOMString    archive;
    attribute DOMString    code;
    attribute DOMString    codeBase;
    attribute DOMString    height;
    attribute long         hspace;
    attribute DOMString    name;
    attribute DOMString    object;
    attribute long         vspace;
    attribute DOMString    width;
};
```

**Attributes**

align of type DOMString

Aligns this object (vertically or horizontally) with respect to its surrounding text. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

alt of type DOMString

Alternate text for user agents not rendering the normal content of this element. See the alt attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

archive of type DOMString

Comma-separated archive list. See the archive attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

code of type DOMString

Applet class file. See the code attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

codeBase of type DOMString

Optional base URI [IETF RFC 2396] for applet. See the codebase attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

height of type DOMString

Override height. See the height attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

hspace of type long

Horizontal space, in pixels, to the left and right of this image, applet, or object. See the hspace attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

name of type DOMString

The name of the applet. See the name attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

object of type DOMString

The value of the "object" attribute. See the object attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

vspace of type long

Vertical space, in pixels, above and below this image, applet, or object. See the vspace attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

width of type DOMString

Override width. See the width attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

### Interface *HTMLMapElement*

Client-side image map. See the MAP element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLMapElement : HTMLElement {
    readonly attribute HTMLCollection  areas;
    attribute DOMString                name;
};
```

#### Attributes

areas of type HTMLCollection [p.11], readonly

The list of areas defined for the image map.

name of type DOMString

Names the map (for use with usemap). See the name attribute definition in HTML 4.01.

### Interface *HTMLAreaElement*

Client-side image map area definition. See the AREA element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLAreaElement : HTMLElement {
    attribute DOMString    accessKey;
    attribute DOMString    alt;
    attribute DOMString    coords;
    attribute DOMString    href;
    attribute boolean      noHref;
    attribute DOMString    shape;
    attribute long         tabIndex;
    attribute DOMString    target;
};
```

**Attributes**

`accessKey` of type `DOMString`

A single character access key to give access to the form control. See the `accesskey` attribute definition in HTML 4.01.

`alt` of type `DOMString`

Alternate text for user agents not rendering the normal content of this element. See the `alt` attribute definition in HTML 4.01.

`coords` of type `DOMString`

Comma-separated list of lengths, defining an active region geometry. See also `shape` for the shape of the region. See the `coords` attribute definition in HTML 4.01.

`href` of type `DOMString`

The URI [IETF RFC 2396] of the linked resource. See the `href` attribute definition in HTML 4.01.

`noHref` of type `boolean`

Specifies that this area is inactive, i.e., has no associated action. See the `nohref` attribute definition in HTML 4.01.

`shape` of type `DOMString`

The shape of the active area. The coordinates are given by `coords`. See the `shape` attribute definition in HTML 4.01.

`tabIndex` of type `long`

Index that represents the element's position in the tabbing order. See the `tabindex` attribute definition in HTML 4.01.

`target` of type `DOMString`

Frame to render the resource in. See the `target` attribute definition in HTML 4.01.

**Interface *HTMLScriptElement***

Script statements. See the `SCRIPT` element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLScriptElement : HTMLElement {
    attribute DOMString    text;
    attribute DOMString    htmlFor;
    attribute DOMString    event;
    attribute DOMString    charset;
    attribute boolean      defer;
    attribute DOMString    src;
    attribute DOMString    type;
};
```

**Attributes**

`charset` of type `DOMString`

The character encoding of the linked resource. See the `charset` attribute definition in HTML 4.01.

`defer` of type `boolean`

Indicates that the user agent can defer processing of the script. See the `defer` attribute definition in HTML 4.01.

event of type DOMString  
*Reserved for future use.*

htmlFor of type DOMString  
*Reserved for future use.*

src of type DOMString  
 URI [IETF RFC 2396] designating an external script. See the src attribute definition in HTML 4.01.

text of type DOMString  
 The script content of the element.

type of type DOMString  
 The content type of the script language. See the type attribute definition in HTML 4.01.

### Interface *HTMLTableElement*

The create\* and delete\* methods on the table allow authors to construct and modify tables. [HTML 4.01] specifies that only one of each of the CAPTION, THEAD, and TFOOT elements may exist in a table. Therefore, if one exists, and the createTHead() or createTFoot() method is called, the method returns the existing THead or TFoot element. See the TABLE element definition in HTML 4.01.

### IDL Definition

```
interface HTMLTableElement : HTMLElement {
    attribute HTMLTableCaptionElement caption;
        // raises(DOMException) on setting

    attribute HTMLTableSectionElement tHead;
        // raises(DOMException) on setting

    attribute HTMLTableSectionElement tFoot;
        // raises(DOMException) on setting

    readonly attribute HTMLCollection rows;
    readonly attribute HTMLCollection tBodies;
    attribute DOMString align;
    attribute DOMString bgColor;
    attribute DOMString border;
    attribute DOMString cellPadding;
    attribute DOMString cellSpacing;
    attribute DOMString frame;
    attribute DOMString rules;
    attribute DOMString summary;
    attribute DOMString width;

        raises(DOMException);
    void deleteRow(in long index)
        raises(DOMException);
};
```

**Attributes**

`align` of type `DOMString`

Specifies the table's position with respect to the rest of the document. See the `align` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`bgColor` of type `DOMString`

Cell background color. See the `bgcolor` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`border` of type `DOMString`

The width of the border around the table. See the `border` attribute definition in HTML 4.01.

`caption` of type `HTMLTableCaptionElement` [p.50]

Returns the table's `CAPTION`, or void if none exists.

**Exceptions on setting**

`DOMException` `HIERARCHY_REQUEST_ERR`: if the element is not a `CAPTION`.

`cellPadding` of type `DOMString`

Specifies the horizontal and vertical space between cell content and cell borders. See the `cellpadding` attribute definition in HTML 4.01.

`cellSpacing` of type `DOMString`

Specifies the horizontal and vertical separation between cells. See the `cellspacing` attribute definition in HTML 4.01.

`frame` of type `DOMString`

Specifies which external table borders to render. See the `frame` attribute definition in HTML 4.01.

`rows` of type `HTMLCollection` [p.11], `readonly`

Returns a collection of all the rows in the table, including all in `THEAD`, `TFOOT`, all `TBODY` elements.

`rules` of type `DOMString`

Specifies which internal table borders to render. See the `rules` attribute definition in HTML 4.01.

`summary` of type `DOMString`

Description about the purpose or structure of a table. See the `summary` attribute definition in HTML 4.01.

`tBodies` of type `HTMLCollection` [p.11], `readonly`

Returns a collection of the table bodies (including implicit ones).

`tFoot` of type `HTMLTableSectionElement` [p.51]

Returns the table's `TFOOT`, or null if none exists.

**Exceptions on setting**

`DOMException` `HIERARCHY_REQUEST_ERR`: if the element is not a `TFOOT`.

`tHead` of type `HTMLTableSectionElement` [p.51]

Returns the table's `THEAD`, or null if none exists.

**Exceptions on setting**

`DOMException` `HIERARCHY_REQUEST_ERR`: if the element is not a `THEAD`.

width of type `DOMString`

Specifies the desired table width. See the width attribute definition in HTML 4.01.

### Methods

`createCaption`

Create a new table caption object or return an existing one.

#### Return Value

`HTMLElement` [p.18] A `CAPTION` element.

#### No Parameters

#### No Exceptions

`createTFoot`

Create a table footer row or return an existing one.

#### Return Value

`HTMLElement` [p.18] A footer element (`TFOOT`).

#### No Parameters

#### No Exceptions

`createTHead`

Create a table header row or return an existing one.

#### Return Value

`HTMLElement` [p.18] A new table header element (`THEAD`).

#### No Parameters

#### No Exceptions

`deleteCaption`

Delete the table caption, if one exists.

#### No Parameters

#### No Return Value

#### No Exceptions

`deleteRow`

Delete a table row.

#### Parameters

index of type `long`

The index of the row to be deleted. This index starts from 0 and is relative to the logical order (not document order) of all the rows contained inside the table. If the index is -1 the last row in the table is deleted.

#### Exceptions

`DOMException` `INDEX_SIZE_ERR`: Raised if the specified index is greater than or equal to the number of rows or if the index is a negative number other than -1.

**No Return Value**

`deleteTFoot`

Delete the footer from the table, if one exists.

**No Parameters**

**No Return Value**

**No Exceptions**

`deleteTHead`

Delete the header from the table, if one exists.

**No Parameters**

**No Return Value**

**No Exceptions**

`insertRow`

Insert a new empty row in the table. The new row is inserted immediately before and in the same section as the current `index`th row in the table. If `index` is -1 or equal to the number of rows, the new row is appended. In addition, when the table is empty the row is inserted into a `TBODY` which is created and inserted into the table.

**Note:** A table row cannot be empty according to [HTML 4.01].

**Parameters**

`index` of type `long`

The row number where to insert a new row. This index starts from 0 and is relative to the logical order (not document order) of all the rows contained inside the table.

**Return Value**

`HTMLTableElement` [p.18] The newly created row.

**Exceptions**

`DOMException` `INDEX_SIZE_ERR`: Raised if the specified index is greater than the number of rows or if the index is a negative number other than -1.

**Interface *HTMLTableCaptionElement***

Table caption See the `CAPTION` element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLTableCaptionElement : HTMLElement {
    attribute DOMString    align;
};
```

**Attributes**

`align` of type `DOMString`  
Caption alignment with respect to the table. See the `align` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

**Interface *HTMLTableColElement***

Regroups the `COL` and `COLGROUP` elements. See the `COL` element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLTableColElement : HTMLElement {
    attribute DOMString    align;
    attribute DOMString    ch;
    attribute DOMString    chOff;
    attribute long         span;
    attribute DOMString    vAlign;
    attribute DOMString    width;
};
```

**Attributes**

`align` of type `DOMString`  
Horizontal alignment of cell data in column. See the `align` attribute definition in HTML 4.01.

`ch` of type `DOMString`  
Alignment character for cells in a column. See the `char` attribute definition in HTML 4.01.

`chOff` of type `DOMString`  
Offset of alignment character. See the `charoff` attribute definition in HTML 4.01.

`span` of type `long`  
Indicates the number of columns in a group or affected by a grouping. See the `span` attribute definition in HTML 4.01.

`vAlign` of type `DOMString`  
Vertical alignment of cell data in column. See the `valign` attribute definition in HTML 4.01.

`width` of type `DOMString`  
Default column width. See the `width` attribute definition in HTML 4.01.

**Interface *HTMLTableSectionElement***

The `THEAD`, `TFOOT`, and `TBODY` elements.

**IDL Definition**

```

interface HTMLTableSectionElement : HTMLElement {
    attribute DOMString    align;
    attribute DOMString    ch;
    attribute DOMString    chOff;
    attribute DOMString    vAlign;
    readonly attribute HTMLCollection rows;
    HTMLElement            insertRow(in long index)
                                raises(DOMException);
    void                   deleteRow(in long index)
                                raises(DOMException);
};

```

**Attributes**

`align` of type `DOMString`

Horizontal alignment of data in cells. See the `align` attribute for `HTMLTheadElement` for details.

`ch` of type `DOMString`

Alignment character for cells in a column. See the `char` attribute definition in HTML 4.01.

`chOff` of type `DOMString`

Offset of alignment character. See the `charoff` attribute definition in HTML 4.01.

`rows` of type `HTMLCollection` [p.11], `readonly`

The collection of rows in this table section.

`vAlign` of type `DOMString`

Vertical alignment of data in cells. See the `valign` attribute for `HTMLTheadElement` for details.

**Methods**

`deleteRow`

Delete a row from this section.

**Parameters**

`index` of type `long`

The index of the row to be deleted, or -1 to delete the last row. This index starts from 0 and is relative only to the rows contained inside this section, not all the rows in the table.

**Exceptions**

`DOMException` `INDEX_SIZE_ERR`: Raised if the specified index is greater than or equal to the number of rows or if the index is a negative number other than -1.

**No Return Value**

`insertRow`

Insert a row into this section. The new row is inserted immediately before the current `index`th row in this section. If `index` is -1 or equal to the number of rows in this section, the new row is appended.

**Parameters**

`index` of type `long`

The row number where to insert a new row. This index starts from 0 and is relative only to the rows contained inside this section, not all the rows in the table.

**Return Value**

HTML`Element` [p.18] The newly created row.

**Exceptions**

DOM`Exception` `INDEX_SIZE_ERR`: Raised if the specified index is greater than the number of rows of if the index is a negative number other than -1.

**Interface *HTMLTableRowElement***

A row in a table. See the TR element definition in HTML 4.01.

**IDL Definition**

```
interface HTMLTableRowElement : HTMLElement {
  readonly attribute long          rowIndex;
  readonly attribute long          sectionRowIndex;
  readonly attribute HTMLCollection cells;
  attribute DOMString             align;
  attribute DOMString             bgColor;
  attribute DOMString             ch;
  attribute DOMString             chOff;
  attribute DOMString             vAlign;
  HTMLElement                    insertCell(in long index)
                                     raises(DOMException);
  void                            deleteCell(in long index)
                                     raises(DOMException);
};
```

**Attributes**

- align of type DOMString  
Horizontal alignment of data within cells of this row. See the align attribute definition in HTML 4.01.
- bgColor of type DOMString  
Background color for rows. See the bgcolor attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.
- cells of type HTML`Collection` [p.11], readonly  
The collection of cells in this row.
- ch of type DOMString  
Alignment character for cells in a column. See the char attribute definition in HTML 4.01.
- chOff of type DOMString  
Offset of alignment character. See the charoff attribute definition in HTML 4.01.
- rowIndex of type long, readonly  
This is in logical order and not in document order. The `rowIndex` does take into account sections (THEAD, TFOOT, or TBODY) within the table, placing THEAD rows first in the index, followed by TBODY rows, followed by TFOOT rows.

`sectionRowIndex` of type `long`, readonly

The index of this row, relative to the current section (THEAD, TFOOT, or TBODY), starting from 0.

`vAlign` of type `DOMString`

Vertical alignment of data within cells of this row. See the `vAlign` attribute definition in HTML 4.01.

### Methods

`deleteCell`

Delete a cell from the current row.

#### Parameters

`index` of type `long`

The index of the cell to delete, starting from 0. If the index is -1 the last cell in the row is deleted.

#### Exceptions

`DOMException` `INDEX_SIZE_ERR`: Raised if the specified `index` is greater than or equal to the number of cells or if the index is a negative number other than -1.

#### No Return Value

`insertCell`

Insert an empty TD cell into this row. If `index` is -1 or equal to the number of cells, the new cell is appended.

#### Parameters

`index` of type `long`

The place to insert the cell, starting from 0.

#### Return Value

`HTMLElement` [p.18] The newly created cell.

#### Exceptions

`DOMException` `INDEX_SIZE_ERR`: Raised if the specified `index` is greater than the number of cells or if the index is a negative number other than -1.

### Interface *HTMLTableCellElement*

The object used to represent the TH and TD elements. See the TD element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLTableCellElement : HTMLElement {
  readonly attribute long      cellIndex;
  attribute DOMString         abbr;
  attribute DOMString         align;
```

```

        attribute DOMString    axis;
        attribute DOMString    bgColor;
        attribute DOMString    ch;
        attribute DOMString    chOff;
        attribute long         colSpan;
        attribute DOMString    headers;
        attribute DOMString    height;
        attribute boolean      noWrap;
        attribute long         rowSpan;
        attribute DOMString    scope;
        attribute DOMString    vAlign;
        attribute DOMString    width;
};

```

### Attributes

`abbr` of type `DOMString`

Abbreviation for header cells. See the `abbr` attribute definition in HTML 4.01.

`align` of type `DOMString`

Horizontal alignment of data in cell. See the `align` attribute definition in HTML 4.01.

`axis` of type `DOMString`

Names group of related headers. See the `axis` attribute definition in HTML 4.01.

`bgColor` of type `DOMString`

Cell background color. See the `bgcolor` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`cellIndex` of type `long`, `readonly`

The index of this cell in the row, starting from 0. This index is in document tree order and not display order.

`ch` of type `DOMString`

Alignment character for cells in a column. See the `char` attribute definition in HTML 4.01.

`chOff` of type `DOMString`

Offset of alignment character. See the `charoff` attribute definition in HTML 4.01.

`colSpan` of type `long`

Number of columns spanned by cell. See the `colspan` attribute definition in HTML 4.01.

`headers` of type `DOMString`

List of `id` attribute values for header cells. See the `headers` attribute definition in HTML 4.01.

`height` of type `DOMString`

Cell height. See the `height` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`noWrap` of type `boolean`

Suppress word wrapping. See the `nowrap` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`rowSpan` of type `long`

Number of rows spanned by cell. See the `rowspan` attribute definition in HTML 4.01.

`scope` of type `DOMString`

Scope covered by header cells. See the `scope` attribute definition in HTML 4.01.

`vAlign` of type `DOMString`

Vertical alignment of data in cell. See the `valign` attribute definition in HTML 4.01.

width of type DOMString

Cell width. See the width attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

### Interface *HTMLFrameSetElement*

Create a grid of frames. See the FRAMESET element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLFrameSetElement : HTMLElement {
    attribute DOMString    cols;
    attribute DOMString    rows;
};
```

#### Attributes

cols of type DOMString

The number of columns of frames in the frameset. See the cols attribute definition in HTML 4.01.

rows of type DOMString

The number of rows of frames in the frameset. See the rows attribute definition in HTML 4.01.

### Interface *HTMLFrameElement*

Create a frame. See the FRAME element definition in HTML 4.01.

#### IDL Definition

```
interface HTMLFrameElement : HTMLElement {
    attribute DOMString    frameBorder;
    attribute DOMString    longDesc;
    attribute DOMString    marginHeight;
    attribute DOMString    marginWidth;
    attribute DOMString    name;
    attribute boolean      noResize;
    attribute DOMString    scrolling;
    attribute DOMString    src;
    // Introduced in DOM Level 2:
    readonly attribute Document    contentDocument;
};
```

#### Attributes

contentDocument of type Document, readonly, introduced in **DOM Level 2**

The document this frame contains, if there is any and it is available, or null otherwise.

frameBorder of type DOMString

Request frame borders. See the frameborder attribute definition in HTML 4.01.

longDesc of type DOMString

URI [IETF RFC 2396] designating a long description of this image or frame. See the longdesc attribute definition in HTML 4.01.

marginHeight of type DOMString

Frame margin height, in pixels. See the marginheight attribute definition in HTML 4.01.

marginWidth of type DOMString

Frame margin width, in pixels. See the `marginwidth` attribute definition in HTML 4.01.

name of type DOMString

The frame name (object of the `target` attribute). See the `name` attribute definition in HTML 4.01.

noResize of type boolean

When true, forbid user from resizing frame. See the `noresize` attribute definition in HTML 4.01.

scrolling of type DOMString

Specify whether or not the frame should have scrollbars. See the `scrolling` attribute definition in HTML 4.01.

src of type DOMString

A URI [IETF RFC 2396] designating the initial frame contents. See the `src` attribute definition in HTML 4.01.

### Interface *HTMLIFrameElement*

Inline subwindows. See the `IFRAME` element definition in HTML 4.01.

### IDL Definition

```
interface HTMLIFrameElement : HTMLElement {
    attribute DOMString    align;
    attribute DOMString    frameBorder;
    attribute DOMString    height;
    attribute DOMString    longDesc;
    attribute DOMString    marginHeight;
    attribute DOMString    marginWidth;
    attribute DOMString    name;
    attribute DOMString    scrolling;
    attribute DOMString    src;
    attribute DOMString    width;
    // Introduced in DOM Level 2:
    readonly attribute Document    contentDocument;
};
```

### Attributes

`align` of type DOMString

Aligns this object (vertically or horizontally) with respect to its surrounding text. See the `align` attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

`contentDocument` of type Document, readonly, introduced in **DOM Level 2**

The document this frame contains, if there is any and it is available, or null otherwise.

`frameBorder` of type DOMString

Request frame borders. See the `frameborder` attribute definition in HTML 4.01.

`height` of type DOMString

Frame height. See the `height` attribute definition in HTML 4.01.

`longDesc` of type DOMString

URI [IETF RFC 2396] designating a long description of this image or frame. See the `longdesc` attribute definition in HTML 4.01.

`marginHeight` of type `DOMString`

Frame margin height, in pixels. See the `marginheight` attribute definition in HTML 4.01.

`marginWidth` of type `DOMString`

Frame margin width, in pixels. See the `marginwidth` attribute definition in HTML 4.01.

`name` of type `DOMString`

The frame name (object of the `target` attribute). See the `name` attribute definition in HTML 4.01.

`scrolling` of type `DOMString`

Specify whether or not the frame should have scrollbars. See the `scrolling` attribute definition in HTML 4.01.

`src` of type `DOMString`

A URI [IETF RFC 2396] designating the initial frame contents. See the `src` attribute definition in HTML 4.01.

`width` of type `DOMString`

Frame width. See the `width` attribute definition in HTML 4.01.

# Appendix A: Changes

*Editor:*

Philippe Le Hégaré, W3C

## A.1: Changes between DOM Level 1 and DOM Level 2

**Note:** The DOM Level 2 HTML module is not backward compatible with the DOM Level 1 HTML module.

### OMG IDL

The DOM Level 2 specifications use CORBA 2.3.1 instead of CORBA 2.2.

### XHTML 1.0 support

The DOM Level 2 HTML module supports HTML 4 as well as XHTML 1.0 documents. Therefore, case sensitivity in methods depends on Document support for the feature "XML" as well as "HTML".

### A.1.1: Changes to DOM Level 1 interfaces and exceptions

#### Interface `HTMLDocument` [p.13]

the method `getElementById` is now inherited from the `Document` interface [DOM Level 2 Core] where it was moved.

#### Interface `HTMLFrameElement` [p.56]

the attribute `contentDocument` was added.

#### Interface `HTMLIFrameElement` [p.57]

the attribute `contentDocument` was added.

#### Interface `HTMLInputElement` [p.27]

the attribute `type` is no longer read only.

The type of the attribute `size` was changed from `DOMString` to `unsigned long`.

#### Interface `HTMLObjectElement` [p.42]

The attribute `contentDocument` was added.

The attribute `form` was removed.

#### Interface `HTMLOptionElement` [p.27]

Changing the `defaultSelected` attribute does not reset the state of the form control.

#### Interface `HTMLTextAreaElement` [p.30]

Changing the `defaultValue` attribute does not reset the contents of the form control.

#### Interface `HTMLImageElement` [p.40]

The `lowSrc` attribute was removed.

The types of the attributes `border`, `height`, `hspace`, `width` and `vspace` were changed from `DOMString` to `long`.

#### Interface `HTMLSelectElement` [p.24]

The type of the attribute `options` was changed from `HTMLCollection` [p.11] to `HTMLOptionsCollection` [p.12].

The attribute `length` is no longer readonly.

#### Module and package name

The module name used in the OMG IDL is now `html2`.

The package name used in the Java bindings is now `org.w3c.dom.html2`.

## A.1.2: New Interfaces

### **Interface HTMLDOMImplementation**

The HTMLDOMImplementation interface was added to the HTML module.

### **Interface HTMLOptionsCollection [p.12]**

The HTMLOptionsCollection [p.12] interface was added to the HTML module.

## Appendix B: IDL Definitions

This appendix contains the complete OMG IDL [OMG IDL] for the Level 2 Document Object Model HTML definitions.

Unfortunately the OMG IDL in this appendix is not conformant due to problems in the validator that was used to validate Level 1. The `readOnly` attribute on the `HTMLInputElement` [p.27] and `HTMLTextAreaElement` [p.30] interfaces, as well as the `object` attribute on the `HTMLAppletElement` [p.44] interface, are not conformant with OMG IDL 2.2. The `valueType` attribute on the `HTMLParamElement` [p.43] interface is not conformant with OMG IDL 2.3.1, which hadn't been released when DOM Level 1 [DOM Level 1] was published.

The IDL files are also available as:

<http://www.w3.org/TR/2002/CR-DOM-Level-2-HTML-20021007/idl.zip>

### html2.idl:

```
// File: html2.idl

#ifndef _HTML2_IDL_
#define _HTML2_IDL_

#include "dom.idl"

#pragma prefix "dom.w3c.org"
module html2
{

    typedef dom::DOMString DOMString;
    typedef dom::Node Node;
    typedef dom::Document Document;
    typedef dom::NodeList NodeList;
    typedef dom::Element Element;

    interface HTMLElement;
    interface HTMLFormElement;
    interface HTMLTableCaptionElement;
    interface HTMLTableSectionElement;

    interface HTMLCollection {
        readonly attribute unsigned long length;
        Node item(in unsigned long index);
        Node namedItem(in DOMString name);
    };

    interface HTMLOptionsCollection {
        attribute unsigned long length;
        // raises(dom::DOMException) on setting

        Node item(in unsigned long index);
        Node namedItem(in DOMString name);
    };
};
```

html2.idl:

```

## Appendix C: Java language Binding

This appendix contains the complete Java language [Java] binding for the Level 2 Document Object Model HTML.

The Java files are also available as

<http://www.w3.org/TR/2002/CR-DOM-Level-2-HTML-20021007/java-binding.zip>

### **org/w3c/dom/html2/HTMLCollection.java:**

```
package org.w3c.dom.html2;

import org.w3c.dom.Node;

public interface HTMLCollection {
    public int getLength();

    public Node item(int index);

    public Node namedItem(String name);
}
```

### **org/w3c/dom/html2/HTMLOptionsCollection.java:**

```
package org.w3c.dom.html2;

import org.w3c.dom.Node;
import org.w3c.dom.DOMException;

public interface HTMLOptionsCollection {
    public int getLength();
    public void setLength(int length)
        throws DOMException;

    public Node item(int index);

    public Node namedItem(String name);
}
```

### **org/w3c/dom/html2/HTMLDocument.java:**

```
package org.w3c.dom.html2;

import org.w3c.dom.Document;
import org.w3c.dom.NodeList;
import org.w3c.dom.DOMException;

public interface HTMLDocument extends Document {
    public String getTitle();
    public void setTitle(String title);
}
```

```
public String getReferrer();

public String getDomain();

public String getURL();

public HTMLElement getBody();
public void setBody(HTMLElement body);

public HTMLCollection getImages();

public HTMLCollection getApplets();

public HTMLCollection getLinks();

public HTMLCollection getForms();

public HTMLCollection getAnchors();

public String getCookie();
public void setCookie(String cookie)
    throws DOMException;

public void open();

public void close();

public void write(String text);

public void writeln(String text);

public NodeList getElementsByTagName(String elementName);
}
```

## **org/w3c/dom/html2/HTMLElement.java:**

```
package org.w3c.dom.html2;

import org.w3c.dom.Element;

public interface HTMLElement extends Element {
    public String getId();
    public void setId(String id);

    public String getTitle();
    public void setTitle(String title);

    public String getLang();
    public void setLang(String lang);

    public String getDir();
    public void setDir(String dir);
}
```

```
    public String getClassName();
    public void setClassName(String className);
}
```

### **org/w3c/dom/html2/HTMLHtmlElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLHtmlElement extends HTMLElement {
    public String getVersion();
    public void setVersion(String version);
}
```

### **org/w3c/dom/html2/HTMLHeadElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLHeadElement extends HTMLElement {
    public String getProfile();
    public void setProfile(String profile);
}
```

### **org/w3c/dom/html2/HTMLLinkElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLLinkElement extends HTMLElement {
    public boolean getDisabled();
    public void setDisabled(boolean disabled);

    public String getCharset();
    public void setCharset(String charset);

    public String getHref();
    public void setHref(String href);

    public String getHreflang();
    public void setHreflang(String hreflang);

    public String getMedia();
    public void setMedia(String media);

    public String getRel();
    public void setRel(String rel);

    public String getRev();
    public void setRev(String rev);

    public String getTarget();
    public void setTarget(String target);
}
```

```
    public String getType();
    public void setType(String type);
}
```

### **org/w3c/dom/html2/HTMLTitleElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLTitleElement extends HTMLElement {
    public String getText();
    public void setText(String text);
}
```

### **org/w3c/dom/html2/HTMLMetaElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLMetaElement extends HTMLElement {
    public String getContent();
    public void setContent(String content);

    public String getHttpEquiv();
    public void setHttpEquiv(String httpEquiv);

    public String getName();
    public void setName(String name);

    public String getScheme();
    public void setScheme(String scheme);
}
```

### **org/w3c/dom/html2/HTMLBaseElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLBaseElement extends HTMLElement {
    public String getHref();
    public void setHref(String href);

    public String getTarget();
    public void setTarget(String target);
}
```

### **org/w3c/dom/html2/HTMLIsIndexElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLIsIndexElement extends HTMLElement {
    public HTMLFormElement getForm();
}
```

```
    public String getPrompt();
    public void setPrompt(String prompt);
}
```

### **org/w3c/dom/html2/HTMLStyleElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLStyleElement extends HTMLElement {
    public boolean getDisabled();
    public void setDisabled(boolean disabled);

    public String getMedia();
    public void setMedia(String media);

    public String getType();
    public void setType(String type);
}
```

### **org/w3c/dom/html2/HTMLBodyElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLBodyElement extends HTMLElement {
    public String getALink();
    public void setALink(String aLink);

    public String getBackground();
    public void setBackground(String background);

    public String getBgColor();
    public void setBgColor(String bgColor);

    public String getLink();
    public void setLink(String link);

    public String getText();
    public void setText(String text);

    public String getVLink();
    public void setVLink(String vLink);
}
```

### **org/w3c/dom/html2/HTMLFormElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLFormElement extends HTMLElement {
    public HTMLCollection getElements();

    public int getLength();
}
```

```
public String getName();
public void setName(String name);

public String getAcceptCharset();
public void setAcceptCharset(String acceptCharset);

public String getAction();
public void setAction(String action);

public String getEnctype();
public void setEnctype(String enctype);

public String getMethod();
public void setMethod(String method);

public String getTarget();
public void setTarget(String target);

public void submit();

public void reset();
}
```

## **org/w3c/dom/html2/HTMLSelectElement.java:**

```
package org.w3c.dom.html2;

import org.w3c.dom.DOMException;

public interface HTMLSelectElement extends HTMLElement {
    public String getType();

    public int getSelectedIndex();
    public void setSelectedIndex(int selectedIndex);

    public String getValue();
    public void setValue(String value);

    public int getLength();
    public void setLength(int length)
        throws DOMException;

    public HTMLFormElement getForm();

    public HTMLOptionsCollection getOptions();

    public boolean getDisabled();
    public void setDisabled(boolean disabled);

    public boolean getMultiple();
    public void setMultiple(boolean multiple);

    public String getName();
    public void setName(String name);
}
```

org/w3c/dom/html2/HTMLOptGroupElement.java:

```
public int getSize();
public void setSize(int size);

public int getTabIndex();
public void setTabIndex(int tabIndex);

public void add(HTMLElement element,
               HTMLElement before)
               throws DOMException;

public void remove(int index);

public void blur();

public void focus();
}
```

### **org/w3c/dom/html2/HTMLOptGroupElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLOptGroupElement extends HTMLElement {
    public boolean getDisabled();
    public void setDisabled(boolean disabled);

    public String getLabel();
    public void setLabel(String label);
}
```

### **org/w3c/dom/html2/HTMLOptionElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLOptionElement extends HTMLElement {
    public HTMLFormElement getForm();

    public boolean getDefaultSelected();
    public void setDefaultSelected(boolean defaultSelected);

    public String getText();

    public int getIndex();

    public boolean getDisabled();
    public void setDisabled(boolean disabled);

    public String getLabel();
    public void setLabel(String label);

    public boolean getSelected();
    public void setSelected(boolean selected);
}
```

```
    public String getValue();
    public void setValue(String value);
}
```

## **org/w3c/dom/html2/HTMLInputElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLInputElement extends HTMLElement {
    public String getDefaultValue();
    public void setDefaultValue(String defaultValue);

    public boolean getDefaultChecked();
    public void setDefaultChecked(boolean defaultChecked);

    public HTMLFormElement getForm();

    public String getAccept();
    public void setAccept(String accept);

    public String getAccessKey();
    public void setAccessKey(String accessKey);

    public String getAlign();
    public void setAlign(String align);

    public String getAlt();
    public void setAlt(String alt);

    public boolean getChecked();
    public void setChecked(boolean checked);

    public boolean getDisabled();
    public void setDisabled(boolean disabled);

    public int getMaxLength();
    public void setMaxLength(int maxLength);

    public String getName();
    public void setName(String name);

    public boolean getReadOnly();
    public void setReadOnly(boolean readOnly);

    public int getSize();
    public void setSize(int size);

    public String getSrc();
    public void setSrc(String src);

    public int getTabIndex();
    public void setTabIndex(int tabIndex);

    public String getType();
    public void setType(String type);
}
```

```
public String getUseMap();
public void setUseMap(String useMap);

public String getValue();
public void setValue(String value);

public void blur();

public void focus();

public void select();

public void click();
}
```

## **org/w3c/dom/html2/HTMLTextAreaElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLTextAreaElement extends HTMLElement {
    public String getDefaultValue();
    public void setDefaultValue(String defaultValue);

    public HTMLFormElement getForm();

    public String getAccessKey();
    public void setAccessKey(String accessKey);

    public int getCols();
    public void setCols(int cols);

    public boolean getDisabled();
    public void setDisabled(boolean disabled);

    public String getName();
    public void setName(String name);

    public boolean getReadOnly();
    public void setReadOnly(boolean readOnly);

    public int getRows();
    public void setRows(int rows);

    public int getTabIndex();
    public void setTabIndex(int tabIndex);

    public String getType();

    public String getValue();
    public void setValue(String value);

    public void blur();

    public void focus();
}
```

```
    public void select();  
}
```

## **org/w3c/dom/html2/HTMLButtonElement.java:**

```
package org.w3c.dom.html2;  
  
public interface HTMLButtonElement extends HTMLElement {  
    public HTMLFormElement getForm();  
  
    public String getAccessKey();  
    public void setAccessKey(String accessKey);  
  
    public boolean getDisabled();  
    public void setDisabled(boolean disabled);  
  
    public String getName();  
    public void setName(String name);  
  
    public int getTabIndex();  
    public void setTabIndex(int tabIndex);  
  
    public String getType();  
  
    public String getValue();  
    public void setValue(String value);  
}
```

## **org/w3c/dom/html2/HTMLLabelElement.java:**

```
package org.w3c.dom.html2;  
  
public interface HTMLLabelElement extends HTMLElement {  
    public HTMLFormElement getForm();  
  
    public String getAccessKey();  
    public void setAccessKey(String accessKey);  
  
    public String getHtmlFor();  
    public void setHtmlFor(String htmlFor);  
}
```

## **org/w3c/dom/html2/HTMLFieldSetElement.java:**

```
package org.w3c.dom.html2;  
  
public interface HTMLFieldSetElement extends HTMLElement {  
    public HTMLFormElement getForm();  
}
```

### **org/w3c/dom/html2/HTMLLegendElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLLegendElement extends HTMLElement {
    public HTMLFormElement getForm();

    public String getAccessKey();
    public void setAccessKey(String accessKey);

    public String getAlign();
    public void setAlign(String align);
}
```

### **org/w3c/dom/html2/HTMLULListElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLULListElement extends HTMLElement {
    public boolean getCompact();
    public void setCompact(boolean compact);

    public String getType();
    public void setType(String type);
}
```

### **org/w3c/dom/html2/HTMLLOListElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLLOListElement extends HTMLElement {
    public boolean getCompact();
    public void setCompact(boolean compact);

    public int getStart();
    public void setStart(int start);

    public String getType();
    public void setType(String type);
}
```

### **org/w3c/dom/html2/HTMLDListElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLDListElement extends HTMLElement {
    public boolean getCompact();
    public void setCompact(boolean compact);
}
```

### **org/w3c/dom/html2/HTMLDirectoryElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLDirectoryElement extends HTMLElement {
    public boolean getCompact();
    public void setCompact(boolean compact);
}
```

### **org/w3c/dom/html2/HTMLMenuElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLMenuElement extends HTMLElement {
    public boolean getCompact();
    public void setCompact(boolean compact);
}
```

### **org/w3c/dom/html2/HTMLLIElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLLIElement extends HTMLElement {
    public String getType();
    public void setType(String type);

    public int getValue();
    public void setValue(int value);
}
```

### **org/w3c/dom/html2/HTMLDivElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLDivElement extends HTMLElement {
    public String getAlign();
    public void setAlign(String align);
}
```

### **org/w3c/dom/html2/HTMLParagraphElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLParagraphElement extends HTMLElement {
    public String getAlign();
    public void setAlign(String align);
}
```

### **org/w3c/dom/html2/HTMLHeadingElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLHeadingElement extends HTMLElement {
    public String getAlign();
    public void setAlign(String align);
}
```

### **org/w3c/dom/html2/HTMLQuoteElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLQuoteElement extends HTMLElement {
    public String getCite();
    public void setCite(String cite);
}
```

### **org/w3c/dom/html2/HTMLPreElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLPreElement extends HTMLElement {
    public int getWidth();
    public void setWidth(int width);
}
```

### **org/w3c/dom/html2/HTMLBRElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLBRElement extends HTMLElement {
    public String getClear();
    public void setClear(String clear);
}
```

### **org/w3c/dom/html2/HTMLBaseFontElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLBaseFontElement extends HTMLElement {
    public String getColor();
    public void setColor(String color);

    public String getFace();
    public void setFace(String face);
}
```

```
    public int getSize();
    public void setSize(int size);
}
```

### **org/w3c/dom/html2/HTMLFontElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLFontElement extends HTMLElement {
    public String getColor();
    public void setColor(String color);

    public String getFace();
    public void setFace(String face);

    public String getSize();
    public void setSize(String size);
}
```

### **org/w3c/dom/html2/HTMLHRElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLHRElement extends HTMLElement {
    public String getAlign();
    public void setAlign(String align);

    public boolean getNoShade();
    public void setNoShade(boolean noShade);

    public String getSize();
    public void setSize(String size);

    public String getWidth();
    public void setWidth(String width);
}
```

### **org/w3c/dom/html2/HTMLModElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLModElement extends HTMLElement {
    public String getCite();
    public void setCite(String cite);

    public String getDateTime();
    public void setDateTime(String dateTime);
}
```

## **org/w3c/dom/html2/HTMLAnchorElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLAnchorElement extends HTMLElement {
    public String getAccessKey();
    public void setAccessKey(String accessKey);

    public String getCharset();
    public void setCharset(String charset);

    public String getCoords();
    public void setCoords(String coords);

    public String getHref();
    public void setHref(String href);

    public String getHreflang();
    public void setHreflang(String hreflang);

    public String getName();
    public void setName(String name);

    public String getRel();
    public void setRel(String rel);

    public String getRev();
    public void setRev(String rev);

    public String getShape();
    public void setShape(String shape);

    public int getTabIndex();
    public void setTabIndex(int tabIndex);

    public String getTarget();
    public void setTarget(String target);

    public String getType();
    public void setType(String type);

    public void blur();

    public void focus();
}
```

## **org/w3c/dom/html2/HTMLImageElement.java:**

```
package org.w3c.dom.html2;

public interface HTMLImageElement extends HTMLElement {
    public String getName();
    public void setName(String name);

    public String getAlign();
```

```
public void setAlign(String align);

public String getAlt();
public void setAlt(String alt);

public String getBorder();
public void setBorder(String border);

public int getHeight();
public void setHeight(int height);

public int getHspace();
public void setHspace(int hspace);

public boolean getIsMap();
public void setIsMap(boolean isMap);

    public void setWidth(String width);

    public Document getContentDocument();
}
```

org/w3c/dom/html2/HTMLIFrameElement.java:

## Appendix D: ECMAScript Language Binding

This appendix contains the complete ECMAScript [ECMAScript] binding for the Level 2 Document Object Model HTML definitions.

**Note:** Exceptions handling is only supported by ECMAScript implementation conformant with the Standard ECMA-262 3rd. Edition ([ECMAScript]).

Objects that implement the **HTMLCollection** interface:

Properties of objects that implement the **HTMLCollection** interface:

### **length**

This read-only property is a **Number**.

Functions of objects that implement the **HTMLCollection** interface:

### **item(index)**

This function returns an object that implements the **Node** interface.

The **index** parameter is a **Number**.

**Note:** This object can also be dereferenced using square bracket notation (e.g. obj[1]).

Dereferencing with an integer **index** is equivalent to invoking the **item** function with that index.

### **namedItem(name)**

This function returns an object that implements the **Node** interface.

The **name** parameter is a **String**.

**Note:** This object can also be dereferenced using square bracket notation (e.g. obj["foo"]).

Dereferencing using a string index is equivalent to invoking the **namedItem** function with that index.

Objects that implement the **HTMLOptionsCollection** interface:

Properties of objects that implement the **HTMLOptionsCollection** interface:

### **length**

This property is a **Number** and can raise an object that implements **DOMException** interface on setting.

Functions of objects that implement the **HTMLOptionsCollection** interface:

### **item(index)**

This function returns an object that implements the **Node** interface.

The **index** parameter is a **Number**.

**Note:** This object can also be dereferenced using square bracket notation (e.g. obj[1]).

Dereferencing with an integer **index** is equivalent to invoking the **item** function with that index.

### **namedItem(name)**

This function returns an object that implements the **Node** interface.

The **name** parameter is a **String**.

**Note:** This object can also be dereferenced using square bracket notation (e.g. obj["foo"]).

Dereferencing using a string index is equivalent to invoking the **namedItem** function with that index.

Objects that implement the **HTMLDocument** interface:

Objects that implement the **HTMLDocument** interface have all properties and functions of the **Document** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLDocument** interface:

**title**

This property is a **String**.

**referrer**

This read-only property is a **String**.

**domain**

This read-only property is a **String**.

**URL**

This read-only property is a **String**.

**body**

This property is an object that implements the **HTMLElement** interface.

**images**

This read-only property is an object that implements the **HTMLCollection** interface.

**applets**

This read-only property is an object that implements the **HTMLCollection** interface.

**links**

This read-only property is an object that implements the **HTMLCollection** interface.

**forms**

This read-only property is an object that implements the **HTMLCollection** interface.

**anchors**

This read-only property is an object that implements the **HTMLCollection** interface.

**cookie**

This property is a **String** and can raise an object that implements **DOMException** interface on setting.

Functions of objects that implement the **HTMLDocument** interface:

**open()**

This function has no return value.

**close()**

This function has no return value.

**write(text)**

This function has no return value.

The **text** parameter is a **String**.

**writeln(text)**

This function has no return value.

The **text** parameter is a **String**.

**getElementsByName(elementName)**

This function returns an object that implements the **NodeList** interface.

The **elementName** parameter is a **String**.

Objects that implement the **HTMLElement** interface:

Objects that implement the **HTMLElement** interface have all properties and functions of the **Element** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLElement** interface:

**id**

This property is a **String**.

**title**

This property is a **String**.

**lang**

This property is a **String**.

**dir**

This property is a **String**.

**className**

This property is a **String**.

Objects that implement the **HTMLHtmlElement** interface:

Objects that implement the **HTMLHtmlElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLHtmlElement** interface:

**version**

This property is a **String**.

Objects that implement the **HTMLHeadElement** interface:

Objects that implement the **HTMLHeadElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLHeadElement** interface:

**profile**

This property is a **String**.

Objects that implement the **HTMLLinkElement** interface:

Objects that implement the **HTMLLinkElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLLinkElement** interface:

**disabled**

This property is a **Boolean**.

**charset**

This property is a **String**.

**href**

This property is a **String**.

**hreflang**

This property is a **String**.

**media**

This property is a **String**.

**rel**

This property is a **String**.

**rev**

This property is a **String**.

**target**

This property is a **String**.

**type**

This property is a **String**.

Objects that implement the **HTMLTitleElement** interface:

Objects that implement the **HTMLTitleElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTitleElement** interface:

**text**

This property is a **String**.

Objects that implement the **HTMLMetaElement** interface:

Objects that implement the **HTMLMetaElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLMetaElement** interface:

**content**

This property is a **String**.

**httpEquiv**

This property is a **String**.

**name**

This property is a **String**.

**scheme**

This property is a **String**.

Objects that implement the **HTMLBaseElement** interface:

Objects that implement the **HTMLBaseElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLBaseElement** interface:

**href**

This property is a **String**.

**target**

This property is a **String**.

Objects that implement the **HTMLIsIndexElement** interface:

Objects that implement the **HTMLIsIndexElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLIsIndexElement** interface:

**form**

This read-only property is an object that implements the **HTMLFormElement** interface.

**prompt**

This property is a **String**.

Objects that implement the **HTMLStyleElement** interface:

Objects that implement the **HTMLStyleElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLStyleElement** interface:

**disabled**

This property is a **Boolean**.

**media**

This property is a **String**.

**type**

This property is a **String**.

Objects that implement the **HTMLBodyElement** interface:

Objects that implement the **HTMLBodyElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLBodyElement** interface:

**aLink**

This property is a **String**.

**background**

This property is a **String**.

**bgColor**

This property is a **String**.

**link**

This property is a **String**.

**text**

This property is a **String**.

**vLink**

This property is a **String**.

Objects that implement the **HTMLFormElement** interface:

Objects that implement the **HTMLFormElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLFormElement** interface:

**elements**

This read-only property is an object that implements the **HTMLCollection** interface.

**length**

This read-only property is a **Number**.

**name**

This property is a **String**.

**acceptCharset**

This property is a **String**.

**action**

This property is a **String**.

**enctype**

This property is a **String**.

**method**

This property is a **String**.

**target**

This property is a **String**.

Functions of objects that implement the **HTMLFormElement** interface:

**submit()**

This function has no return value.

**reset()**

This function has no return value.

Objects that implement the **HTMLSelectElement** interface:

Objects that implement the **HTMLSelectElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLSelectElement** interface:

**type**

This read-only property is a **String**.

**selectedIndex**

This property is a **Number**.

**value**

This property is a **String**.

**length**

This property is a **Number** and can raise an object that implements **DOMException** interface on setting.

**form**

This read-only property is an object that implements the **HTMLFormElement** interface.

**options**

This read-only property is an object that implements the **HTMLOptionsCollection** interface.

**disabled**

This property is a **Boolean**.

**multiple**

This property is a **Boolean**.

**name**

This property is a **String**.

**size**

This property is a **Number**.

**tabIndex**

This property is a **Number**.

Functions of objects that implement the **HTMLSelectElement** interface:

**add(element, before)**

This function has no return value.

The **element** parameter is an object that implements the **HTMLElement** interface.

The **before** parameter is an object that implements the **HTMLElement** interface.

This function can raise an object that implements the **DOMException** interface.

**remove(index)**

This function has no return value.

The **index** parameter is a **Number**.

**blur()**

This function has no return value.

**focus()**

This function has no return value.

Objects that implement the **HTMLOptGroupElement** interface:

Objects that implement the **HTMLOptGroupElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLOptGroupElement** interface:

**disabled**

This property is a **Boolean**.

**label**

This property is a **String**.

Objects that implement the **HTMLOptionElement** interface:

Objects that implement the **HTMLOptionElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLOptionElement** interface:

**form**

This read-only property is an object that implements the **HTMLFormElement** interface.

**defaultSelected**

This property is a **Boolean**.

**text**

This read-only property is a **String**.

**index**

This read-only property is a **Number**.

**disabled**

This property is a **Boolean**.

**label**

This property is a **String**.

**selected**

This property is a **Boolean**.

**value**

This property is a **String**.

Objects that implement the **HTMLInputElement** interface:

Objects that implement the **HTMLInputElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLInputElement** interface:

**defaultValue**

This property is a **String**.

**defaultChecked**

This property is a **Boolean**.

**form**

This read-only property is an object that implements the **HTMLFormElement** interface.

**accept**

This property is a **String**.

**accessKey**

This property is a **String**.

**align**

This property is a **String**.

**alt**

This property is a **String**.

**checked**

This property is a **Boolean**.

**disabled**

This property is a **Boolean**.

**maxLength**

This property is a **Number**.

**name**

This property is a **String**.

**readOnly**

This property is a **Boolean**.

**size**

This property is a **Number**.

**src**  
This property is a **String**.

**tabIndex**  
This property is a **Number**.

**type**  
This property is a **String**.

**useMap**  
This property is a **String**.

**value**  
This property is a **String**.

Functions of objects that implement the **HTMLInputElement** interface:

**blur()**  
This function has no return value.

**focus()**  
This function has no return value.

**select()**  
This function has no return value.

**click()**  
This function has no return value.

Objects that implement the **HTMLTextAreaElement** interface:

Objects that implement the **HTMLTextAreaElement** interface have all properties and functions of the **HTMLFormElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTextAreaElement** interface:

**defaultValue**  
This property is a **String**.

**form**  
This read-only property is an object that implements the **HTMLFormElement** interface.

**accessKey**  
This property is a **String**.

**cols**  
This property is a **Number**.

**disabled**  
This property is a **Boolean**.

**name**  
This property is a **String**.

**readOnly**  
This property is a **Boolean**.

**rows**  
This property is a **Number**.

**tabIndex**  
This property is a **Number**.

**type**  
This read-only property is a **String**.

**value**  
This property is a **String**.

Functions of objects that implement the **HTMLTextAreaElement** interface:

**blur()**

This function has no return value.

**focus()**

This function has no return value.

**select()**

This function has no return value.

Objects that implement the **HTMLButtonElement** interface:

Objects that implement the **HTMLButtonElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLButtonElement** interface:

**form**

This read-only property is an object that implements the **HTMLFormElement** interface.

**accessKey**

This property is a **String**.

**disabled**

This property is a **Boolean**.

**name**

This property is a **String**.

**tabIndex**

This property is a **Number**.

**type**

This read-only property is a **String**.

**value**

This property is a **String**.

Objects that implement the **HTMLLabelElement** interface:

Objects that implement the **HTMLLabelElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLLabelElement** interface:

**form**

This read-only property is an object that implements the **HTMLFormElement** interface.

**accessKey**

This property is a **String**.

**htmlFor**

This property is a **String**.

Objects that implement the **HTMLFieldSetElement** interface:

Objects that implement the **HTMLFieldSetElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLFieldSetElement** interface:

**form**

This read-only property is an object that implements the **HTMLFormElement** interface.

Objects that implement the **HTMLLegendElement** interface:

Objects that implement the **HTMLLegendElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLLegendElement** interface:

**form**

This read-only property is an object that implements the **HTMLFormElement** interface.

**accessKey**

This property is a **String**.

**align**

This property is a **String**.

Objects that implement the **HTMLUListElement** interface:

Objects that implement the **HTMLUListElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLUListElement** interface:

**compact**

This property is a **Boolean**.

**type**

This property is a **String**.

Objects that implement the **HTMLLOListElement** interface:

Objects that implement the **HTMLLOListElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLLOListElement** interface:

**compact**

This property is a **Boolean**.

**start**

This property is a **Number**.

**type**

This property is a **String**.

Objects that implement the **HTMLDListElement** interface:

Objects that implement the **HTMLDListElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLDListElement** interface:

**compact**

This property is a **Boolean**.

Objects that implement the **HTMLDirectoryElement** interface:

Objects that implement the **HTMLDirectoryElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLDirectoryElement** interface:

**compact**

This property is a **Boolean**.

Objects that implement the **HTMLMenuElement** interface:

Objects that implement the **HTMLMenuElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLMenuElement** interface:

**compact**

This property is a **Boolean**.

Objects that implement the **HTMLLIElement** interface:

Objects that implement the **HTMLLIElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLLIElement** interface:

**type**

This property is a **String**.

**value**

This property is a **Number**.

Objects that implement the **HTMLDivElement** interface:

Objects that implement the **HTMLDivElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLDivElement** interface:

**align**

This property is a **String**.

Objects that implement the **HTMLParagraphElement** interface:

Objects that implement the **HTMLParagraphElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLParagraphElement** interface:

**align**

This property is a **String**.

Objects that implement the **HTMLHeadingElement** interface:

Objects that implement the **HTMLHeadingElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLHeadingElement** interface:

**align**

This property is a **String**.

Objects that implement the **HTMLQuoteElement** interface:

Objects that implement the **HTMLQuoteElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLQuoteElement** interface:

**cite**

This property is a **String**.

Objects that implement the **HTMLPreElement** interface:

Objects that implement the **HTMLPreElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLPreElement** interface:

**width**

This property is a **Number**.

Objects that implement the **HTMLBRElement** interface:

Objects that implement the **HTMLBRElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLBRElement** interface:

**clear**

This property is a **String**.

Objects that implement the **HTMLBaseFontElement** interface:

Objects that implement the **HTMLBaseFontElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLBaseFontElement** interface:

**color**

This property is a **String**.

**face**

This property is a **String**.

**size**

This property is a **Number**.

Objects that implement the **HTMLFontElement** interface:

Objects that implement the **HTMLFontElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLFontElement** interface:

**color**

This property is a **String**.

**face**

This property is a **String**.

**size**

This property is a **String**.

Objects that implement the **HTMLHRElement** interface:

Objects that implement the **HTMLHRElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLHRElement** interface:

**align**

This property is a **String**.

**noShade**

This property is a **Boolean**.

**size**

This property is a **String**.

**width**

This property is a **String**.

Objects that implement the **HTMLModElement** interface:

Objects that implement the **HTMLModElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLModElement** interface:

**cite**

This property is a **String**.

**dateTime**

This property is a **String**.

Objects that implement the **HTMLAnchorElement** interface:

Objects that implement the **HTMLAnchorElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLAnchorElement** interface:

**accessKey**

This property is a **String**.

**charset**

This property is a **String**.

**coords**

This property is a **String**.

**href**  
This property is a **String**.

**hreflang**  
This property is a **String**.

**name**  
This property is a **String**.

**rel**  
This property is a **String**.

**rev**  
This property is a **String**.

**shape**  
This property is a **String**.

**tabIndex**  
This property is a **Number**.

**target**  
This property is a **String**.

**type**  
This property is a **String**.

Functions of objects that implement the **HTMLAnchorElement** interface:

**blur()**  
This function has no return value.

**focus()**  
This function has no return value.

Objects that implement the **HTMLImageElement** interface:

Objects that implement the **HTMLImageElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLImageElement** interface:

**name**  
This property is a **String**.

**align**  
This property is a **String**.

**alt**  
This property is a **String**.

**border**  
This property is a **String**.

**height**  
This property is a **Number**.

**hspace**  
This property is a **Number**.

**isMap**  
This property is a **Boolean**.

**longDesc**  
This property is a **String**.

**src**  
This property is a **String**.

**useMap**

This property is a **String**.

**vspace**

This property is a **Number**.

**width**

This property is a **Number**.

Objects that implement the **HTMLObjectElement** interface:

Objects that implement the **HTMLObjectElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLObjectElement** interface:

**form**

This read-only property is an object that implements the **HTMLFormElement** interface.

**code**

This property is a **String**.

**align**

This property is a **String**.

**archive**

This property is a **String**.

**border**

This property is a **String**.

**codeBase**

This property is a **String**.

**codeType**

This property is a **String**.

**data**

This property is a **String**.

**declare**

This property is a **Boolean**.

**height**

This property is a **String**.

**hspace**

This property is a **Number**.

**name**

This property is a **String**.

**standby**

This property is a **String**.

**tabIndex**

This property is a **Number**.

**type**

This property is a **String**.

**useMap**

This property is a **String**.

**vspace**

This property is a **Number**.

**width**

This property is a **String**.

**contentDocument**

This read-only property is an object that implements the **Document** interface.

Objects that implement the **HTMLParamElement** interface:

Objects that implement the **HTMLParamElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLParamElement** interface:

**name**

This property is a **String**.

**type**

This property is a **String**.

**value**

This property is a **String**.

**valueType**

This property is a **String**.

Objects that implement the **HTMLAppletElement** interface:

Objects that implement the **HTMLAppletElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLAppletElement** interface:

**align**

This property is a **String**.

**alt**

This property is a **String**.

**archive**

This property is a **String**.

**code**

This property is a **String**.

**codeBase**

This property is a **String**.

**height**

This property is a **String**.

**hspace**

This property is a **Number**.

**name**

This property is a **String**.

**object**

This property is a **String**.

**vspace**

This property is a **Number**.

**width**

This property is a **String**.

Objects that implement the **HTMLMapElement** interface:

Objects that implement the **HTMLMapElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLMapElement** interface:

**areas**

This read-only property is an object that implements the **HTMLCollection** interface.

**name**

This property is a **String**.

Objects that implement the **HTMLAreaElement** interface:

Objects that implement the **HTMLAreaElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLAreaElement** interface:

**accessKey**

This property is a **String**.

**alt**

This property is a **String**.

**coords**

This property is a **String**.

**href**

This property is a **String**.

**noHref**

This property is a **Boolean**.

**shape**

This property is a **String**.

**tabIndex**

This property is a **Number**.

**target**

This property is a **String**.

Objects that implement the **HTMLScriptElement** interface:

Objects that implement the **HTMLScriptElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLScriptElement** interface:

**text**

This property is a **String**.

**htmlFor**

This property is a **String**.

**event**

This property is a **String**.

**charset**

This property is a **String**.

**defer**

This property is a **Boolean**.

**src**

This property is a **String**.

**type**

This property is a **String**.

Objects that implement the **HTMLTableElement** interface:

Objects that implement the **HTMLTableElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableElement** interface:

**caption**

This property is an object that implements the **HTMLTableCaptionElement** interface and

can raise an object that implements **DOMException** interface on setting.

**tHead**

This property is an object that implements the **HTMLTableSectionElement** interface and can raise an object that implements **DOMException** interface on setting.

**tFoot**

This property is an object that implements the **HTMLTableSectionElement** interface and can raise an object that implements **DOMException** interface on setting.

**rows**

This read-only property is an object that implements the **HTMLCollection** interface.

**tBodies**

This read-only property is an object that implements the **HTMLCollection** interface.

**align**

This property is a **String**.

**bgColor**

This property is a **String**.

**border**

This property is a **String**.

**cellPadding**

This property is a **String**.

**cellSpacing**

This property is a **String**.

**frame**

This property is a **String**.

**rules**

This property is a **String**.

**summary**

This property is a **String**.

**width**

This property is a **String**.

Functions of objects that implement the **HTMLTableElement** interface:

**createTHead()**

This function returns an object that implements the **HTMLTableSectionElement** interface.

**deleteTHead()**

This function has no return value.

**createTFoot()**

This function returns an object that implements the **HTMLTableSectionElement** interface.

**deleteTFoot()**

This function has no return value.

**createCaption()**

This function returns an object that implements the **HTMLTableCaptionElement** interface.

**deleteCaption()**

This function has no return value.

**insertRow(index)**

This function returns an object that implements the **HTMLTableSectionElement** interface.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

**deleteRow(index)**

This function has no return value.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

Objects that implement the **HTMLTableCaptionElement** interface:

Objects that implement the **HTMLTableCaptionElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableCaptionElement** interface:

**align**

This property is a **String**.

Objects that implement the **HTMLTableColElement** interface:

Objects that implement the **HTMLTableColElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableColElement** interface:

**align**

This property is a **String**.

**ch**

This property is a **String**.

**chOff**

This property is a **String**.

**span**

This property is a **Number**.

**vAlign**

This property is a **String**.

**width**

This property is a **String**.

Objects that implement the **HTMLTableSectionElement** interface:

Objects that implement the **HTMLTableSectionElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableSectionElement** interface:

**align**

This property is a **String**.

**ch**

This property is a **String**.

**chOff**

This property is a **String**.

**vAlign**

This property is a **String**.

**rows**

This read-only property is an object that implements the **HTMLCollection** interface.

Functions of objects that implement the **HTMLTableSectionElement** interface:

**insertRow(index)**

This function returns an object that implements the **HTMLElement** interface.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

**deleteRow(index)**

This function has no return value.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

Objects that implement the **HTMLTableRowElement** interface:

Objects that implement the **HTMLTableRowElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableRowElement** interface:

**rowIndex**

This read-only property is a **Number**.

**sectionRowIndex**

This read-only property is a **Number**.

**cells**

This read-only property is an object that implements the **HTMLCollection** interface.

**align**

This property is a **String**.

**bgColor**

This property is a **String**.

**ch**

This property is a **String**.

**chOff**

This property is a **String**.

**vAlign**

This property is a **String**.

Functions of objects that implement the **HTMLTableRowElement** interface:

**insertCell(index)**

This function returns an object that implements the **HTMLElement** interface.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

**deleteCell(index)**

This function has no return value.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

Objects that implement the **HTMLTableCellElement** interface:

Objects that implement the **HTMLTableCellElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableCellElement** interface:

**cellIndex**

This read-only property is a **Number**.

**abbr**

This property is a **String**.

**align**

This property is a **String**.

**axis**

This property is a **String**.

**bgColor**

This property is a **String**.

**ch**

This property is a **String**.

**chOff**

This property is a **String**.

**colSpan**

This property is a **Number**.

**headers**

This property is a **String**.

**height**

This property is a **String**.

**noWrap**

This property is a **Boolean**.

**rowSpan**

This property is a **Number**.

**scope**

This property is a **String**.

**vAlign**

This property is a **String**.

**width**

This property is a **String**.

Objects that implement the **HTMLFrameSetElement** interface:

Objects that implement the **HTMLFrameSetElement** interface have all properties and functions of the **HTMLFrameElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLFrameSetElement** interface:

**cols**

This property is a **String**.

**rows**

This property is a **String**.

Objects that implement the **HTMLFrameElement** interface:

Objects that implement the **HTMLFrameElement** interface have all properties and functions of the **HTMLFrameElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLFrameElement** interface:

**frameBorder**

This property is a **String**.

**longDesc**

This property is a **String**.

**marginHeight**

This property is a **String**.

**marginWidth**

This property is a **String**.

**name**

This property is a **String**.

**noResize**

This property is a **Boolean**.

**scrolling**

This property is a **String**.

**src**

This property is a **String**.

**contentDocument**

This read-only property is an object that implements the **Document** interface.

Objects that implement the **HTMLIFrameElement** interface:

Objects that implement the **HTMLIFrameElement** interface have all properties and functions of the **HTMLInputElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLIFrameElement** interface:

**align**

This property is a **String**.

**frameBorder**

This property is a **String**.

**height**

This property is a **String**.

**longDesc**

This property is a **String**.

**marginHeight**

This property is a **String**.

**marginWidth**

This property is a **String**.

**name**

This property is a **String**.

**scrolling**

This property is a **String**.

**src**

This property is a **String**.

**width**

This property is a **String**.

**contentDocument**

This read-only property is an object that implements the **Document** interface.

HTMLAnchorElement objects in String expressions are evaluated as `HTMLAnchorElement.href` [p.40]. For example:

```
alert(" The absolute URI is " + myAnchorElement);
```

is equivalent to

```
alert(" The absolute URI is " + myAnchorElement.href);
```

## Appendix E: Acknowledgements

Many people contributed to this specification, including members of the DOM Working Group and the DOM Interest Group. We especially thank the following:

Andy Heninger (IBM), Arnaud Le Hors (W3C and IBM), Bill Smith (Sun), Bill Shea (Merrill Lynch), Chris Lovett (Microsoft), Chris Wilson (Microsoft), David Brownell (Sun), Glenn Adams (ATSC), James Davidson (Sun), Joe Kesselman (IBM), Joe Lapp (webMethods), Joe Marini (Macromedia), Johnny Stenback (Netscape), Jonathan Marsh (Microsoft), Jonathan Robie (Texcel Research and Software AG), Kim Adamson-Sharpe (SoftQuad Software Inc.), Lauren Wood (SoftQuad Software Inc., *former Chair*), Laurence Cable (Sun), Mark Davis (IBM), Mark Scardina (Oracle), Martin Dürst (W3C), Mick Goulish (Software AG), Mike Champion (Arbortext and Software AG), Miles Sabin (Cromwell Media), Patti Lutsky (Arbortext), Paul Grosso (Arbortext), Peter Sharpe (SoftQuad Software Inc.), Phil Karlton (Netscape), Philippe Le Hégarret (W3C, *W3C team contact and former Chair*), Ramesh Lekshmyanarayanan (Merrill Lynch), Ray Whitmer (iMall, Excite@Home, Netscape and *Chair*), Rich Rollman (Microsoft), Rick Gessner (Netscape), Tom Pixley (Netscape), Vidur Apparao (Netscape), Vinod Anupam (Lucent).

Thanks to all those who have helped to improve this specification by sending suggestions and corrections.

The W3C tried to produce the most useful and accurate specification as possible but we wouldn't have been able to do so without the help of the DOM Test Suite effort. Special thanks to Curt Arnold, Rick Rivello (NIST), Robert Clary (Netscape) and Dimitris Dimitriadis for the DOM Level 2 HTML Test Suite. The DOM Test Suite is based on the test suite developed by Mary Brady (NIST).

### E.1: Production Systems

This specification was written in XML. The HTML, OMG IDL, Java and ECMAScript bindings were all produced automatically.

This document was generated using DOM Level 2. We used Xerces as the basis DOM implementation and wish to thank the authors. Philippe Le Hégarret and Arnaud Le Hors wrote the Java programs which are the DOM application.

### E.2: DOM Level 1

The authors of the DOM Level 1 specification, members of the DOM Working Group, deserve much credit for their hard work:

Lauren Wood (SoftQuad, Inc., *chair*), Arnaud Le Hors (W3C, *W3C staff contact*), Andrew Watson (Object Management Group), Bill Smith (Sun), Chris Lovett (Microsoft), Chris Wilson (Microsoft), David Brownell (Sun), David Singer (IBM), Don Park (invited), Eric Vasilik (Microsoft), Gavin Nicol (INSO), Ian Jacobs (W3C), James Clark (invited), Jared Sorensen (Novell), Jonathan Robie (Texcel Research and Software AG), Mike Champion (ArborText and Software AG), Paul Grosso (ArborText), Peter Sharpe (SoftQuad, Inc.), Phil Karlton (Netscape), Ray Whitmer (iMall), Rich Rollman (Microsoft), Rick Gessner (Netscape), Robert Sutor (IBM), Scott Isaacs (Microsoft), Sharon Adler (INSO), Steve Byrne (JavaSoft),

Tim Bray (invited), Tom Pixley (Netscape), Vidur Apparao (Netscape).

Thanks to Joe English, author of cost for helping so much in allowing us to develop a framework that made the production of this specification possible.

Thanks to Jan Kärman, author of html2ps for helping so much in creating the Postscript version of the specification.

The editors of the first version of the DOM HTML module were Mike Champion (ArborText), Vidur Apparao (Netscape), Scott Isaacs (Microsoft, January 1998), Chris Wilson (Microsoft, after January 1998), and Ian Jacobs (W3C).

# Glossary

## *Editors:*

Arnaud Le Hors, IBM  
 Lauren Wood, SoftQuad Software Inc.  
 Robert S. Sutor, IBM (for DOM Level 1)

Several of the following term definitions have been borrowed or modified from similar definitions in other W3C or standards documents. See the links within the definitions for more information.

### **convenience**

A *convenience method* is an operation on an object that could be accomplished by a program consisting of more basic operations on the object. *Convenience methods* are usually provided to make the API easier and simpler to use or to allow specific programs to create more optimized implementations for common operations. A similar definition holds for a *convenience property*.

### **data model**

A *data model* is a collection of descriptions of data structures and their contained fields, together with the operations or functions that manipulate them.

### **DOM Level 0**

The term "*DOM Level 0*" refers to a mix (not formally specified) of HTML document functionalities offered by Netscape Navigator version 3.0 and Microsoft Internet Explorer version 3.0. In some cases, attributes or *methods* have been included for reasons of backward compatibility with "*DOM Level 0*".

### **HTML**

The HyperText Markup Language (*HTML*) is a simple markup language used to create hypertext documents that are portable from one platform to another. HTML documents are SGML documents with generic semantics that are appropriate for representing information from a wide range of applications. [HTML 4.01]

### **language binding**

A programming *language binding* for an IDL specification is an implementation of the interfaces in the specification for the given language. For example, a Java language binding for the Document Object Model IDL specification would implement the concrete Java classes that provide the functionality exposed by the interfaces.

### **live**

An object is *live* if any change to the underlying document structure is reflected in the object.

### **tokenized**

The description given to various information items (for example, attribute values of various types, but not including the StringType CDATA) after having been processed by the XML processor. The process includes stripping leading and trailing white space, and replacing multiple space characters by one. See the definition of tokenized type.
